

EC COMPLIANCE REPORT

For

**M/s. Oric Organic
Chemicals Pvt. Ltd,
At AURIC City, Plot
No.9. Sector 1, Village- Shendra,
Aurangabad**

EC Compliance Report

Sr. No.	Conditions	Compliance
1.	PP to submit registered affidavit for not violating any requirement of EIA Notification, 2006 as amended from time to time	Register Affidavit for not violating is attached as <i>Annexure 1</i> . As per EIA Notification, 2006
2.	PP to relook into the lay out plan, provide green belt all along the periphery with minimum 5 meter width and submit revised layout plan showing internal roads with six meter width and nine meter turning radius, provision of cul-de-sac at dead ends of the internal roads if any, location of pollution control equipment, parking areas, 33% green belt with its dimensions, rain water harvesting structures (locations with dimensions), storm water drain lines, along with index and area statement showing calculations for each area and cross sections of storm water drain and rain water harvesting pits etc.	Revised layout is attached as <i>Annexure 2</i> .
3.	PP proposes ZLD effluent Treatment Plant. PP get the design of ETP vetted by the reputed institute like IIT, NIT etc. before commissioning of the manufacturing.	The work has been assigned to Dr. Parag Gogate, Professor of Chemical Engineering, ICT, Mumbai. Letter of Acknowledgement is attached as <i>Annexure 3</i> .
4.	PP to carry out HAZOP for all products/process stages and submit HAZOP report along with proposed mitigation measures/recommendations and undertaking for compliance of all recommendations of the HAZOP study	We undertake that, we will comply all recommendations of the HAZOP Study with particular reference to the action suggested and summarised under section 5 of the study. The HAZOP Study Report was made by Mr. Subhas L. Bonde. Bonde Technical Services, Thane. HAZOP Study Report is attached as <i>Annexure 4</i> .
5.	PP using many odorous compounds. PP to prepare odor monitoring and control plan including fence monitoring for all such odorous compounds to ensure nuisance to the adjacent areas.	Prepared odor Management and control, plan note attached as <i>Annexure 5</i> .
6.	PP to provide mobile toilet or bio toilet during construction phase and submit revised EMP costing considering realistic cost	We undertake that, we will provide bio-toilets during construction phase. Undertaking enclosed as <i>Annexure 6</i> .
7.	PP to ensure to deploy well trained regular employees on all critical/hazardous operations and storages of hazardous chemicals instead of contract workers. Regular safety training to be provided to all such employees.	We undertake that, we will deploy well trained regular employees on all operations & storage of hazardous chemicals & regular safety training will be provided to them.
8.	PP to prepare chemical compatibility chart of all chemicals and finished products handled, stored on site and ensure its storage/handling as per compatibility.	Chemical Compatibility chart given as follows:

COMPATIBILITY/ REACTIVITY HAZARD MATRIX

Chemicals Mixing With →		Acetic Acid, Glacial	Air, Compressed	Manganese (II) Sulfate Monohydrate	Nitrogen	P-Nitro Toluene	Sodium Hydroxide Soln.	Sulfuric Acid, Fuming	Sulfuric Acid, Spent	Water
Acetic Acid, Glacial.										
Air, Compressed.		C								
Manganese(II) Sulfate Monohydrate.		C	Y							
Nitrogen.		Y	Y	Y						
P-Nitro Toluene.		C	C	N	Y					
Sodium Hydroxide Soln.		N	C	N	Y	N				
Sulfuric Acid, Fuming.		N	C	C	Y	N	N			
Sulfuric Acid, Spent.		N	C	C	Y	N	N	C		
Water.		Y	Y	C	Y	Y	C	C	C	

9.	PP to provide Continuous Online Monitoring System connected to the servers of CPCB and MPCB. PP to include VOCs monitoring in the schedule ambient air monitoring plan.	We have placed Order for same and the same is under installation
10.	PP to submit VOCs emission control and its management plan.	The only VOC is acetic acid. It is used in small amounts to lower the pH for the reduction reaction. The entire transfer is under closed conditions. VOCs emission control and Management plan enclose as <i>Annexure 7</i> .
11.	PP ensure to provide adequate space for parking of all types of vehicles including external vehicles carrying raw material and finished products. No vehicle shall be parked on the public road.	A total area of 2130.47 sqm. Is allocated for parking which is 10. % of total plot area. This is in line with the conditions of the AITL.
12.	PP to ensure to prepare and implement On-site and Off-site emergency handling plan. The plan shall be prepared based on the HAZOP and Risk Assessment. Required training to all employees be provided on the emergency handling plans.	The work has been assigned to Mr. Bonde. Letter of acknowledgement is enclose as <i>Annexure 8</i> .
13.	PP to complete rain water harvesting facility before the commissioning of the manufacturing activity.	We undertake that, rainwater harvesting facility will be completed before commissioning of manufacturing activity. Undertaking is attached as <i>Annexure 9</i> .
14.	PP to utilize CER funds for the development of public infrastructure in the vicinity of the project area in consultation with District Administration. PP to ensure effective outcome of the CER expenditure.	We undertake that, we will utilize our CER fund i.e. Rs. 1.575 cr. for development of public infrastructure in the vicinity of project in consultation with District administration or the AITL management. Undertaking is enclose as <i>Annexure 10</i> .
15.	PP to provide solar energy for the illumination of common areas like administrative building, parking areas, streetlight etc.	We are proposing installation of phot voltaic cell based street lights.

SEIAA Conditions:

1.	PP Submitted that they have obtained plan approval from AITL dated 11.07.2023 and as per the plan the Plot area is 20562 sq. meter (33 %) is provided.	33% land is reserved for green belt.
2.	PP to undertake Miyawaki Plantation of native and indigenous trees such as Banyan, Peepal, Neem, Jamun and other suitable trees as per the Forest Department, Govt. of Maharashtra circular no SaVaVi-2019/C.R.3/F-11, dated 25 th June, 2019. This said plantation to be completed in the first year of operation of Environmental Clearance under expert guidance of Miyawaki experts/arborist.	We Undertaking that, we will complete Miyawaki Plantation of native and indigenous trees under the guidance of Miyawaki expert/arborist in the first year. Undertaking enclose as Annexure 11
3.	PP to strictly observe the Solid Waste Management Rules, 2016 as amended time to time.	Noted and agreed.
4.	PP to strictly observe the Hazardous and other Waste (Management & Trans Boundary Movement) Rules, 2016 as amended time to time.	Noted and agreed.
5.	PP to identify all sources of fugitive air pollution on site and provide pollution control measures to mitigate pollution and meet the standard parameters stipulated in the Environment (Protection) Rules, 1986 amended time to time.	Noted and agreed.
6.	PP to ensure storage of chemicals as per the Manufacture, Storage and Import of Hazardous Chemicals Rules, 1989 amended time to time to ensure no release of any chemical to the atmosphere and leakage to the soil.	Noted and agreed.
7.	PP to ensure transport, storage, handling and use of the flammable/toxic chemicals as per conditions stipulated in license/approval of the Petroleum & Explosive Safety Organization (PESO).	Noted and agreed.
8.	PP to obtain approval and License from the Directorate of Industrial Health & Safety (DIHS) for proposed project and implement all condition stipulated there in. PP to carry out Safety Audit as stipulated in the Maharashtra Factories Rules, 1963 and ensure compliance of recommendation of the Audit.	As per Directorate of Industrial Health & Safety (DIHS) 1. We will obtain approval and License. 2. We will carry out Safety Audit as per Maharashtra Factories Rules, 1963
9.	PP to provide solar Energy for illumination of Administrative Building, Street Lights and parking Area.	Noted and agreed.
10.	PP to ensure use of briquette/bio coal/pellets/or any such suitable product derived from scientific processing of appropriate stream of dry waste/agricultural waste, not less than 50% of the total fuel requirement to the boiler.	Noted and agreed.
11.	PP to provide roof top Rain water Harvesting Facility.	Unit followed the given condition.
12.	PP to ensure that proposed project is ZLD.	The Project is ZLD
General Conditions:		
1.	The project proponent shall advertise at least in two local newspapers widely circulated in the region around the project, one of which shall be in the Marathi language of the local concerned within seven days of issue of this letter, informing that the project has been accorded Environmental Clearance and copies of Environmental Clearance letter are available with the Maharashtra Pollution Control	Unit followed the given condition.

	<p>Board, website of the company and may also be seen at Website at http://parivesh.nic.in</p>  	
II.	<p>The project Proponent shall upload the status of compliance (soft Copies) of the conditions stipulated Environmental Clearance letter including monitoring data of air, water, soil, noise etc. on their website and shall update the same periodically. The half yearly compliance report shall simultaneously be submitted to the Maharashtra Pollution Controls Board, SEIAA and the Regional Office off MoEF&CC at Nagpur, on 1st June & 1st December of each calendar year.</p>	Noted. Unit shall follow the condition.
III.	<p>Separate fund shall be allocated for the implementation of Environmental Management Plan along with item wise break up and specific time line for its completion. The cost shall be included as part of the project cost. The funds earmarked for the environmental protection measures shall not be diverted for other purpose and year-wise expenditure should be reported to the MPCB and the SEIAA.</p>	Unit has en-marked separate fund for environment management plan. Break-up of the same is as below.

Construction Phase

Sr. no.	Attributes	Specific Measures	Budget in Rs. Lakh	Time line for 1/5 Implement	Responsibility	
1.	Air	(Water sprinkling & Dust suppression)	2.5	12 months or till completion of construction	Factory Manager	
2.	Water	(Sanitation facility, Drinking water, Septic tank & Soak pit)	2.5		Factory Manager	
3.	Noise	(Personal Protective Equipment's)	2		Executive	
4.	Solid Waste & Hazardous Waste	(Storage facility and disposal as per law)			EHS	
5.	Safety & Health	(Safety devices like PPE, etc. First aid facility, tie up with ambulance and hospital).	5		Executive EHS	

Operation Phase

Sr. no.	Attributes	Specific Measures	Budget in Rs. Lakh	Time line for 1/5 Implement	Responsibility	
6.	Air Pollution	Bag Filter & stack	1500	Start of commissioning to end of life of project	Factory Manager	
7.	Water Pollution Control	ETP, STP	1700		Factory Manager	
8.	Environment monitoring	Laboratory Equipment			Factory Manager	
9.	Rain water Harvesting	RWH Tank & Piping network	15		Factory Manager	
10.	Occupational Health	OHC Centre	8		Factory Manager	
11.	Green Belt Development	Sampling, Manure & Land preparation			Executive	
12.	Solid Waste Management		150		EHS	
13.	Energy Saving Devices and Solar Power	Energy efficient Electric Motors, LED Bulbs	35		Factory Manager	
14.	Solar Power	Solar panels and system	30		Factory Manager	
15.	Safety & Fire Fighting	Fire Hydrants, Safety devices, Sensors, Fire pump & ambulance	100		Executive EHS	
IV.	A Separate Environmental Management Cell with qualified personal shall be set up for implementation of the stipulated environmental safeguards.					
	Unit has formed separate environment management cell as below.					

S. No.	Designation	Proposed Responsibility
1.	Designated Partner	Overall Responsibility for Environment Management and legal compliance related to pollution control and environment safety.
2.	Plant Manager	Daily feedback from production team and keeping control on emissions to keep them within prescribed norms
3.	EHS Officer	Environmental health and safety (EHS) officers are responsible for all aspects of an organization's compliance with occupational and environmental laws and regulations.
4.	In-charge ETP	Monitoring to the efficiency of Effluent Treatment Plant & reporting higher authority time to time.
V.	In the event of failure of any pollution control equipment, the manufacturing activity shall be immediately stopped safety till the effective functioning of pollution control equipment's is regained.	Noted. Unit shall strictly follow the given condition.
VI.	PP to strictly follow conditions stipulated in the Consent to Establish/Operate issued by the Maharashtra Pollution Control Board.	Noted. Unit shall strictly follow the given condition.
VII.	PP to provide separate drains for storm water and effluent, and ensure that, the storm water drains are dry all the time and in no case the effluent shall mix with the storm water drain.	The provision of separate Storm water and effluent drainage has been made.
VIII.	Periodic Monitoring of ground water in the study area as marked in the Environmental Impact Assessment Report shall be undertaken and results analyzed to ascertain any change in the quality of water. Results shall be regularly submitted to the Maharashtra Pollution Control Board.	Noted. Unit shall follow the given condition thoroughly.
IX.	The overall noise levels in and around the factory premises shall be kept within the prescribed standard under the Environment (Protection) Act, 1986 and Rule, 1989 as amended from time to time by providing adequate noise control measures and protective equipment's like ear muff and ear plug etc.	Unit is following the given condition thoroughly by providing proper acoustic hoods, enclosures over the sources of noise generation.
X.	Adequate Safety measures shall be ensured to limit the risk zone within the factory premises. Leak detection system shall be installed for early detection and mitigation purpose.	Unit is following the condition thoroughly.

XI.	PP to scrupulously follow the requirements of Maharashtra Factories Act, 1948 & Rules 1963 as amended from time to time.	Noted. Unit shall follow the given condition thoroughly.
XII.	The Environmental Statement for each financial year ending on 31 st March in Form-V as is mandated to be submitted by the Project Proponent to the concerned Pollution Control Board as prescribed under the Environment (Protection) Rule, 1989 as amended from time to time, it shall also be put on the website of the company along with the status of the compliance of the conditions stipulated in the Environmental Clearance letter.	Noted. Unit shall follow the given condition.

ANNEXURE I

Registered Affidavit

श्रीमंती प्रियांका खाजेड

We, M/s One Organics Chemicals Pvt. Ltd. state that our proposal is in consideration for Environmental Clearance for our project situated at Plot no. 9, Sector 1, AURIC City, Chh. Sambhajinagar (MH).

We hereby submit our affidavit that we will not violate any requirement of EIA Notification 2006 as amended from time to time.

For One Organic Chemicals Pvt. Ltd.

Shrikant Patil
Dr. Shevak K. Bhumgarra
Chairman and Managing Director

Motlibai Wadia Building,

Fort Mumbai – 400 001

Subject: Acceptance of assignment of Design adequacy of ETP for ZLD facility

Dear Sir

In reference to your letter regarding the assignment of exploring the Design adequacy of ETP for ZLD facility at your proposed plant near Aurangabad, this is to confirm that I am accepting the assignment. I have received all the requested documents including the details of Effluent treatment plant and the production processes. I will be able to supply the report in about 3 weeks.

Thanking you with best regards

Sincerely yours

Dr. P. R. Gogate

Professor of Chemical Engineering
Department of Chemical Engineering
ICT, Mumbai – 400 019, India

DISCLAIMER:

Information contained in this report is believed to be reliable but no representation, guarantee or warranty of any kind are made as to its accuracy, suitability for a particular application or results to be obtained from them. It is up to the manufacturer to ensure that the information contained in the report is relevant to the product manufactured, handled or sold by him as the case may be. We make no warranties expressed or implied as respect of the adequacy of this document for any particular purpose.

SECTION 1: EXECUTIVE SUMMARY

The proposed synthetic organic chemical manufacturing plant by M/S. Oric Organic Chemicals Private Limited, is located at AURIC City, Plot No.: 9, Sector 1, Village: Shendri, District: Amravati, Maharashtra - 444 154.

LIST OF PRODUCTS

SN	Name	CAS NO.	TMP
1	p-Nitrotoluene-o-Sulphonic acid (PNTOSA).	121-03-9	689
2	4,4'-Dinitrostilbene-2,2'-disulphonic acid (DNS).	128-42-7	562
3	4,4'-Diaminostilbene-2,2'-disulphonic acid (DAS).	81-11-6	440
4	Dilute Sulphuric Acid.	-	650
5	Iron oxide.	-	750

Details of process and flow chart given in the Section 3 of this report.

THE ASSIGNMENT

Manufacturing activity involves of hazardous chemicals, as listed in the Schedule I Part II of "The Manufacture, storage and import of Hazardous Chemicals Rules 1989". The occupier has obligations/ general responsibilities to fulfil.

- Identification of major accident hazard and taking adequate steps.
- To prevent such major accidents and to limit their consequences to person and the environment.

In compliance to this requirement this HAZOP study is initiated by the management to identify the hazards at the site. M/S. Brund Technical Services (BTS) - Thane is consulting organization in the field of safety and conducts HAZOP studies for such installations regularly. On the request of management, BTS - Thane undertook this Hazards and Operability study [HAZOP].

OBJECTIVES

The objectives of the study are as follows:

- To carry out a systematic critical appraisal of all potential hazards involving personnel, plant, services and operation methods.

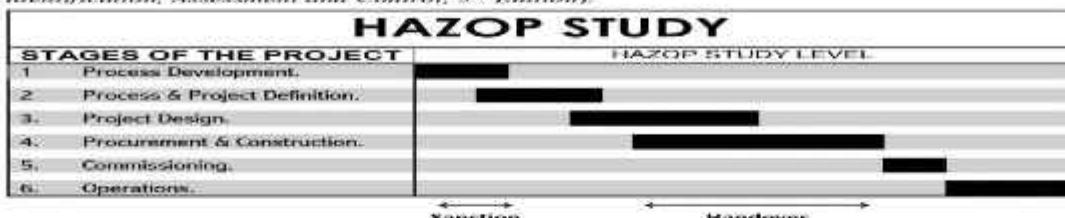

- To ensure that occupational health and safety standards fully satisfy the legal requirements and those of the company's written safety policies, objectives and programs.
- To determine the adequacy of instrumentation/ controls/ inter locks for safe, smooth start up and operation of the plants.

HAZOP METHODOLOGY

HAZOP (Hazard and Operability studies) methodology adopted is as per the techniques of "Hazard Identification And Risk Analysis" Code of Practice (IS 15656: 2006).

HAZOP STAGE

Hazard study systems used in Mond Division of ICI involves six hazard studies depending upon the stage of project such as Pre-design, Design/ Modification, Construction, Commissioning, Operation & maintenance and Decommissioning/ Shutdown. This is done systematically by applying suitable guidewords in the study which varies according to the desired purpose. (Refer: Lee's Loss Prevention in the Process Industries, *Hazard Identification, Assessment and Control, 3rd Edition*).

The project is at stage 3 and the guide words are used accordingly HAZOP work sheet. Identification of hazards carried out and potential failure cases of significant consequences. Events are recorded in the HAZOP work sheet.

While identifying the hazard(s) a filtering process is carried and only portions with potential risk are involved for risk analysis. Hazard is not considered for further analysis, if it is:

- Unrealizable, and
- Not very significant

5

HAZARD RATING

As indicated in the IS 15656: 2006, the technique updating is required whenever improved plant operational information and equipment/ human failure data becomes available. Further, it advises to improve risk calculations using newer analytical methods as and when they are developed.

As large number of hazard/ events are normally generated during HAZOP Study and it is important to select the significant hazard rating events. The classification of the hazards necessary for designing effective action plan. A risk evaluation matrix is required, hence following risk rating matrix is used for classifying the identified hazards.

HAZARD RATING MATRIX

Hazards are identified each event Severity and Probability was evaluated on scale 1 to 5 to generate risk rating (R) on the scale 1 to 25 using following hazard rating matrix.

HAZARD RISK RATING MATRIX

PROBABILITY		SEVERITY				
		Very High 5	High 4	Moderate 3	Slight 2	NIL 1
Very Likely.	5	25	20	15	10	05
Likely.	4	20	18	12	08	04
Quite Possible.	3	15	12	09	06	03
Possible.	2	10	08	06	04	02
Not Likely.	1	05	04	03	02	01

According to the rating of each risk, it is necessary to evaluate it according to the following.

- Urgent situations (16 to 25) that require action immediately.
- High-risk situations (10 to 15) that require action in the short and medium-term.
- Medium-risk situations (5 to 9) that require action or further evaluation within an appropriate period.
- Low-risk situations (less than 5) that may require relatively little or no action.

SCOPE OF WORK

The scope of this report is limited to the P & I Diagrams for the installation.

Any release of hazardous chemicals to environment in air/ water/ soil/ causing unsafe conditions in the operations for site and surroundings community are considered as thrust area for HAZOP Study.

6

The battery limits of this study are restricted to the equipment's and necessary utilities as per the P & I.D and covers activities at the above-mentioned installation.

Exclusion: Every other activity and installations.

If the HAZOP leader or any team member believed that a particular system or P & ID should not be studied by the team either because it is identical to the system already studied or because it involves no additional hazards, this was agreed upon by the team and the reasons recorded in the report.

The study conducted following P & I Diagrams wise nodes.

SN.	NUMBER	SHEET	NAME	Rev
1	AE/00C/350/PID/001	1 OF 3	P & I D for Sulfonation SR1 & SR2.	1
2	AE/00C/350/PID/001	2 OF 3	P & I D for Sulfonation CR1 & CR2.	1
3	AE/00C/350/PID/001	3 OF 3	P & I D for Sulfonation HT1, HT2 & HT3.	1
4	AE/00C/350/PID/002	1 OF 3	P & I D for Oxidation Crystallizers.	1
5	AE/00C/350/PID/002	2 OF 4	P & I D for Oxidation dissolver (repeated).	1
6	AE/00C/350/PID/002	3 OF 3	P & I D for Oxidation vats.	1
7	AE/00C/350/PID/003	1 OF 4	P & I D for Reduction reactors and P25 & P26.	1
8	AE/00C/350/PID/003	2 OF 4	P & I D for Reduction Crystallizer.	1
9	AE/00C/350/PID/003	3 OF 4	P & I D for Reduction ANF.	1
10	AE/00C/350/PID/003	4 OF 4	P & I D for Reduction spin flash dryer.	1

CONCLUSION

Hazards are identified at site operations considered for study. The company has already taken considered series of measures as listed in the hazop worksheets as per safety philosophy adopted.

The identified hazards and action suggested are divided in three categories as follows:

- Immediate implementation and providing hardware support to minimise consequence.
- Adopting administrative measures by way of SOP's, work permits, training etc.
- Open questions which need further work and evaluation of suitable solution in future.

After through brain storming session with the concerned stake holders as a outcome of entire study Action suggested in the form of recommendations are finalized.

RECOMMENDATIONS

To finalize from Section No. 5 after meeting.

MANAGEMENT CO-OPERATION

We thank the HAZOP committee and management for positive approach shown and excellent co-operation extended throughout the studies to complete the studies in scheduled time frame.

SECTION 2: THE PROPOSAL

PRODUCT: Para Nitro Toluene Ortho Sulphonic Acid (PNTOSA)						
Synonyms	4-Nitrotoluene-2-Sulfonic Acid.					
CAS NO.	121-03-09					
Molecular Formula	C ₇ H ₇ S.O ₅ N					
Molecular Weight	217 g/mol					

Quantity	Quantity	Working Day	Batch Output	Batches	Batches	Production
Mt/m	Kg/m	No./m	g.	No./m	No./day	Kg/day

BRIEF MANUFACTURING PROCESS

In the agitated reactor, PNT is added & then Oleum is added at the controlled rate to complete the reaction. After stirring these materials are transferred to a vessels with Water. In an ANF filtered off. The solid is the required product (PNTOSA) and the filtrate is dilute sulphuric acid which is collected & stored for reuse & sale.

REACTIONS - (Route of Synthesis):

9

PRODUCT: 4,4'-DI Nitrostilbene-2,2'- Disulphonic Acid (DNS)						
Synonyms	Di Nitro Stilbene (DNS).					
CAS NO.	128-42-7					
Molecular Formula	C ₁₄ H ₁₀ N ₂ O ₁₀ S ₂					
Molecular Weight	430.4 g/mol					

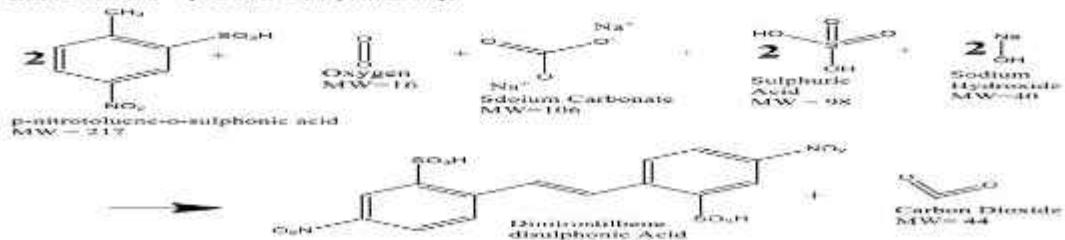

Quantity	Quantity	Working Day	Batch Output	Batches	Batches	Production
Mt/m	Kg/m	No./m	Kg	No./m	No./day	Kg/day

BRIEF MANUFACTURING PROCESS

1st stage intermediate is pumped into the oxidation reactor and further diluted with water, pH adjusted with Sodium Hydroxide and purged with air. After completion of reaction the reaction mass is concentrated in a process evaporator and then dropped into crystallizer. Crystallized reaction mass is filtered in the ANF. Filtrate is collected in the holding tank and sent to the ETP holding tanks.

Residue is dropped into the dissolver tanks and stored for feeding to reduction vessels.

REACTIONS - (Route of Synthesis):

10

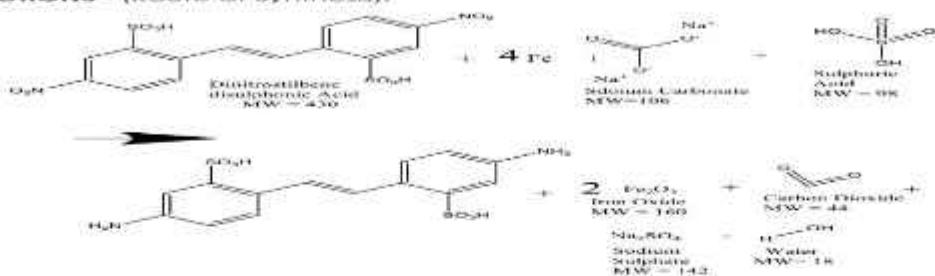

PRODUCT: 4,4'-diaminostilbene-2,2'-disulphonic acid (DAS)						
Synonyms	Aminostic acid.					
CAS NO.	81-11-8					
Molecular Formula	C ₁₄ H ₁₄ N ₂ O ₆ S ₂					
Molecular Weight	370.39 g/mol					
Quantity	Quantity	Working Day	Batch Output	Batches	Batches	Production
Mt/m 440	Kg/m 4,40,000	No./m 25	Kg 2112	No./m 208	No./day 8	Kg/day 16,896

BRIEF MANUFACTURING PROCESS

Intermediate from 2nd Stage is dissolved and pumped to reduction reactor. Iron powder, acetic acid and water are charged and reaction is run under reflux as per process parameters. On reaction completion, reaction mass is filtered free of iron oxide and sent to crystallizers. Crystallized mass is filtered in a vertical press and dried cake is fed to spin flash dryer. Dry powder obtained is the final product.

Filtered iron oxide is collected in sludge beds and packed for selling to recyclers.

REACTIONS - (Route of Synthesis):

11

SECTION 3: PRELIMINARY HAZARD ANALYSIS

CAUSES	HAZARD DURING OPERATING STAGE OF THE PLANT	STATUS
Natural Causes	Cyclone. Earthquake. Land slide. Flooding - heavy rain.	✓ ✓ ✓ ✓
Physical Hazards	Noise. Radiation (UV, radioactive materials). Extreme temperatures. Vibration. Material handling operations. Steam pressure piping failure/ boiler drum failure. Boiler explosion.	✓ ✗ ✓ ✓ ✓ ✓ ✓
Bio Hazards	Pandemics/ epidemics/ communicable diseases by pests, insects, rodents. Animal/ snake bites. Occupational health hazards at industry	✓ ✓ ✓
Electrical Hazard	Transformer oil fire/ explosion. Lightening strike. Fires due to short circuit. Power outage.	✓ ✓ ✓ ✓
Mechanical	Failure of machinery and equipment. Lack of safety guards in machines. Poor maintenance of machinery and equipment. Power driven tools, saws, grinders, abrasive cutting wheels. Scaffolding – fixed and portable failure. Structural failure. Truck and transport vehicles.	✓ ✓ ✓ ✓ ✓ ✓ ✓
Hazardous Substances And Wastes	Hazardous waste uncontrolled storage and disposal. Site decontamination.	✓ ✓
Storage & Process Operations	Accidental release of flammable/ toxic gas fire/ explosion/ health hazard. Uncontrolled Reaction exotherm pressurization/ explosion. Static charge as source of ignition leading to fire/ explosion. Toxic gas release at scrubber vent. Dust explosion. Hazardous waste spill hazard. Compatibility and reactivity hazard at chemical storages	✓ ✓ ✓ ✓ ✓ ✓ ✓

12

CAUSES	HAZARD DURING OPERATING STAGE OF THE PLANT	STATUS
Frequent Causes Of Accidents During Construction Activity	Being struck by falling object.	✓
	Caught in or compressed.	✓
	Cranes, winches, hoisting and hauling equipments failure.	✓
	Dusting.	✓
	Electricity (electrocution).	✓
	Fall from height.	✓
	Uncontrolled explosion during demolition/ land development.	X
	Hit by sharp objects.	X
	Injuries during handling heavy objects.	X
	Lack of PPE, housekeeping practices, safety signs.	✓
	Oxygen deficiency in confined spaces.	✓
	Paint/ thinner cleaners, pesticides, waste oil, flammable combustible materials fire at store.	✓
	Poor illumination.	✓
	Slipping on wet surfaces.	✓
	Snapping cables, ropes, chains, slings, hooks, chains.	✓
	Struck by moving objects.	✓
	Welding fumes and radiations.	X
Ergonomics & Psychosocial Hazards	Repetitive, monotonous, excessive workload, strain injuries.	✓
	Mental stress, human relations (aggressive behavior, alcohol and drug abuse, violence).	✓
	Poverty, low wages, lack of education.	✓
	Long working hours, shift work, temporary employment.	✓
	Security threats.	✓
Others	Escalating the designed event during Mock Drill.	✓
	Power outage to emergency equipments/ cable failure.	✓
	Stampede during evacuation at assembly point.	✓
	Spreading rumors.	✓
	Organic contaminated water generated during fire fighting operations, sprinkler operation, spill/ floor washing may enter storm drain.	✓

HAZARDOUS CHEMICALS

The chemicals as marked * in following table are hazardous chemicals having Ref. No. listed in Column 2 of Part II of Schedule I of "The Manufacture Storage and Import of Hazardous Chemicals (MSIHC) Rules, 1989". NFPA - hazard rating of Health, Flammability and Reactivity are also considered for quick hazard identification of by using MSDS.

13

INITIAL SCREENING OF THE CHEMICALS

Sr. No.	Name	CAS No.	NFPA Hazard Rating			Ref. No.
			Health	Flammability	Reactivity	
1	4,4'-Diamino-Stilbene-2,2'-disulphonic acid (DAS).	61-11-0	-	-	-	
2	4,4'-Dinitro-Stilbene-2,2'-disulphonic acid (DNS).	126-42-7	-	-	-	
3	Acetic Acid.	64-19-7	3	2	0	
4	Diamino-Stilbene Disulphonic Acid (DASDA).	61-11-8	2	0	0	2
5	Diesel	66278-33-6	0	2	0	
6	Iron Powder.	79-83-9	-	-	-	
7	Manganese Sulphate.	10034-26-5	-	-	-	
8	Oleum (63% SO ₃).	8034-95-7	3	0	2	444
9	Para Nitro Toluene	92-92-0	3	1	1	
10	p-Nitrotoluene-o-Sulphonic acid (PNTOSA).	121-03-9	-	-	-	
11	Sodium Chlorate	497-19-8	2	0	0	
12	Sodium Octanoate.	7725-14-6	2	3	1	
13	Sodium Hydroxide.*	3330-73-2	3	0	1	521
14	Sulphuric Acid (70%).*	7604-93-9	3	0	2	521

The chemicals as marked * in above table are hazardous chemicals as per criteria laid down in Part I(0) of Schedule I of "The MSIHC Rules, 1989".

INVENTORY (HAZARDOUS CHEMICALS)

Sr. No.	Name	Physical State	Maximum Quantity Stored	Consumption (t/m)	Mode Of Storage
1	PTI.	Solid below 35°C.	400 MT.	415.46	200 KL, 5 m dia. < 10-2 m ht. 2 nos. of PTI over ground tanks.
2	Urea (44% NH ₄ NO ₂).	Liquid	120 MT.	9,189.76	60 KL, 4 m dia. > 5 m ht. 2 nos. of M's over ground tanks.
3	Spent Acid.	Liquid	400 MT.	46.32	100 KL, 5 m dia. > 5.5 m ht. 1 nos. of PP spiral wound over ground tanks.
4	Acetic Acid.	Liquid	12 MT.	8.32	12 KL, 2 m dia. 4 m ht. 2 nos. of 500 L over ground tanks.
5	Iron Powder.			480	
6	Manganese Sulphate.			0	
7	Sodium Bicarbonate.			0	
8	Sodium Carbonate.			250	
9	Sodium Hydroxide.			172	
10	Diesel.		0.6	Need Based.	Drums.

Chemicals marked with * are listed in Schedule I, Part II of "The Manufacture, Storage and Import of Hazardous Chemicals (amendments) Rules, 2000".

14

APPLICABILITY OF "THE MSIIC RULES, 1989"

Group	Material	Maximum Storage Capacity Mt.	Threshold Quantity (Mt.) For application of Rule	
			5,7-9,13-15	10 - 12
2	Toxic chemicals	Sulfuric Tri Oxide.	**	15 75
5.3	Very Highly Flammable Liquids.	Having: Flash Point ≤ 23°C & Initial Boiling Point >35°C	< threshold	1,500 10,000
5.5	Highly Flammable Liquids.	Having: 23°C < Flash Point ≤ 60°C	< threshold	2,500 20,000
5.6	Flammable Liquids.	Having: 60°C < Flash Point < 90°C	< threshold	5,000 50,000

*Criteria used: "The Manufacture Storage and Import of Hazardous Chemicals Rules, 1989"
 ** Sulfuric Tri Oxide equivalent in Oleum.

The site is a Major Accident Hazards (MAH) installation.

COMPATIBILITY/ REACTIVITY HAZARD MATRIX

Chemicals Mixing With →	Acetic Acid	Air, Compressed	Manganese (II) Sulfate Monohydrate	Nitrogen	P-Nitro Toluene	Sodium Hydroxide Soln.	Sulfuric Acid, Fuming	Sulfuric Acid, Spent	Water
Acetic Acid, Glacial.									
Air, Compressed.	C								
Manganese(II) Sulfate Monohydrate.	C	Y							
Nitrogen.	Y	Y	Y						
P-Nitro Toluene.	C	C	N	Y					
Sodium Hydroxide Soln.	N	C	N	Y	N				
Sulfuric Acid, Fuming.	N	C	C	Y	N	N			
Sulfuric Acid, Spent.	N	C	C	Y	N	N	C		
Water.	Y	Y	C	Y	Y	C	C	C	

CHART LEGEND:

	Y	Compatible	-	No hazardous reactivity issues expected.
	N	Incompatible	-	Hazardous reactivity issues expected.
	C	Caution	-	May be hazardous under certain conditions.
	SR	Self Reactive	-	Potentially self reactive e.g. polymerizable.

Incompatibility implies as the equimolar mixing of two materials under ambient temperature and pressures that will produce heat (10 Kcal per mole), gases or other real and immediate hazards.

PREDICTED HAZARDS REPORT

Chemicals and Reactive Groups in this Mixture:

- ✓ ACETIC ACID, GLACIAL
- ✓ AIR, COMPRESSED
- ✓ MANGANESE(II) SULFATE MONOHYDRATE
- ✓ NITROGEN
- ✓ P-NITROTOLUENE
- ✓ SODIUM HYDROXIDE SOLUTION
- ✓ SULFURIC ACID
- ✓ SULFURIC ACID, FUMING
- ✓ SULFURIC ACID, SPENT
- ✓ WATER

ACETIC ACID, GLACIAL mixed with itself -

- INTRINSIC REACTIVE HAZARDS:
 - No reaction expected.

— END OF HAZARDS FOR THIS ITEM —

AIR, COMPRESSED mixed with

ACETIC ACID, GLACIAL -

- PREDICTED HAZARDS:
 - May be hazardous but unknown
- POTENTIAL GASES:
 - No gases predicted.

AIR, COMPRESSED mixed with itself -

- INTRINSIC REACTIVE HAZARDS:
 - No reaction expected.

— END OF HAZARDS FOR THIS ITEM —

MANGANESE(II) SULFATE MONOHYDRATE mixed with

ACETIC ACID, GLACIAL -

- PREDICTED HAZARDS:
 - Exothermic reaction at ambient temperatures (releases heat)
- POTENTIAL GASES:
 - No gases predicted.

AIR, COMPRESSED -

- PREDICTED HAZARDS:
 - No known hazardous reaction

16

- POTENTIAL GASES:
 - No gases predicted.

MANGANESE(II) SULFATE MONOHYDRATE mixed with itself -

- INTRINSIC REACTIVE HAZARDS:
 - No reaction expected.

— END OF HAZARDS FOR THIS ITEM —

NITROGEN mixed with

ACETIC ACID, GLACIAL -

- PREDICTED HAZARDS:
 - No known hazardous reaction
- POTENTIAL GASES:
 - No gases predicted.

NITROGEN mixed with AIR, COMPRESSED -

- PREDICTED HAZARDS:
 - No known hazardous reaction
- POTENTIAL GASES:
 - No gases predicted.

MANGANESE(II) SULFATE MONOHYDRATE -

- PREDICTED HAZARDS:
 - No known hazardous reaction
- POTENTIAL GASES:
 - No gases predicted.

NITROGEN mixed with itself -

- INTRINSIC REACTIVE HAZARDS:
 - No reaction expected.

— END OF HAZARDS FOR THIS ITEM —

P-NITROTOLUENE mixed with

ACETIC ACID, GLACIAL -

- PREDICTED HAZARDS:
 - Reaction products may be explosive or sensitive to shock or friction
- POTENTIAL GASES:
 - No gases predicted.

AIR, COMPRESSED -

- PREDICTED HAZARDS:
 - May be hazardous but unknown
- POTENTIAL GASES:
 - No gases predicted.

17

MANGANESE(II) SULFATE MONOHYDRATE -

- **PREDICTED HAZARDS:**
 - ⇒ Exothermic reaction at ambient temperatures (releases heat)
 - ⇒ Reaction liberates gaseous products and may cause pressurization
 - ⇒ Reaction products may be explosive or sensitive to shock or friction
- **POTENTIAL GASES:**
 - ⇒ Nitrogen Oxides

NITROGEN -

- **PREDICTED HAZARDS:**
 - ⇒ No known hazardous reaction
- **POTENTIAL GASES:**
 - ⇒ No gases predicted.

P-NITROTOLUENE mixed with itself -

- **INTRINSIC REACTIVE HAZARDS:**
 - ⇒ No reaction expected.

--- END OF HAZARDS FOR THIS ITEM ---

SODIUM HYDROXIDE SOLUTION mixed with**ACETIC ACID, GLACIAL -**

- **PREDICTED HAZARDS:**
 - ⇒ Reaction liberates gaseous products and may cause pressurization
 - ⇒ Reaction may be particularly intense, violent, or explosive
 - ⇒ Reaction products may be corrosive
 - ⇒ Reaction products may be flammable
 - ⇒ Reaction products may be toxic
- **POTENTIAL GASES:**
 - ⇒ Acid Fumes
 - ⇒ Base Fumes

AIR, COMPRESSED -

- **PREDICTED HAZARDS:**
 - ⇒ May be hazardous but unknown
- **POTENTIAL GASES:**
 - ⇒ No gases predicted.

MANGANESE(II) SULFATE MONOHYDRATE -

- **PREDICTED HAZARDS:**
 - ⇒ Exothermic reaction at ambient temperatures (releases heat)
 - ⇒ Reaction liberates gaseous products and may cause pressurization
 - ⇒ Reaction products may be corrosive
- **POTENTIAL GASES:**
 - ⇒ Acid Fumes
 - ⇒ Base Fumes

18

- ⇒ Hydrogen
- ⇒ Hydrogen Iodide

NITROGEN -

- **PREDICTED HAZARDS:**
 - ⇒ No known hazardous reaction
- **POTENTIAL GASES:**
 - ⇒ No gases predicted.

P-NITROTOLUENE -

- **PREDICTED HAZARDS:**
 - ⇒ Reaction may be particularly intense, violent, or explosive
 - ⇒ Reaction products may be explosive or sensitive to shock or friction
- **POTENTIAL GASES:**
 - ⇒ Nitrogen Oxides

SODIUM HYDROXIDE SOLUTION mixed with itself -

- **INTRINSIC REACTIVE HAZARDS:**
 - ⇒ No reaction expected.

--- END OF HAZARDS FOR THIS ITEM ---

SULFURIC ACID, FUMING mixed with**ACETIC ACID, GLACIAL -**

- **PREDICTED HAZARDS:**
 - ⇒ Exothermic reaction at ambient temperatures (releases heat)
 - ⇒ Reaction liberates gaseous products and may cause pressurization
 - ⇒ Reaction products may be flammable
 - ⇒ Reaction products may be toxic
- **POTENTIAL GASES:**
 - ⇒ Carbon Dioxide
 - ⇒ Carbon Monoxide
 - ⇒ Chlorine Dioxide
 - ⇒ Halogen Oxides
 - ⇒ Nitrogen Oxides
 - ⇒ Sulfur Oxides

AIR, COMPRESSED -

- **PREDICTED HAZARDS:**
 - ⇒ May be hazardous but unknown
- **POTENTIAL GASES:**
 - ⇒ No gases predicted.

MANGANESE(II) SULFATE MONOHYDRATE -

- **PREDICTED HAZARDS:**
 - ⇒ Exothermic reaction at ambient temperatures (releases heat)

19

- **POTENTIAL GASES:**
→ No gases predicted.

NITROGEN -

- **PREDICTED HAZARDS:**
→ No known hazardous reaction
- **POTENTIAL GASES:**
→ No gases predicted.

P-NITROTOLUENE -

- **PREDICTED HAZARDS:**
⇒ Reaction liberates gaseous products and may cause pressurization
⇒ Reaction may be particularly intense, violent, or explosive
⇒ Reaction products may be explosive or sensitive to shock or friction
⇒ Reaction products may be toxic
- **POTENTIAL GASES:**
⇒ Carbon Dioxide
⇒ Carbon Monoxide
⇒ Methylisothiocyanate
⇒ Nitrogen Oxides

SODIUM HYDROXIDE SOLUTION -

- **PREDICTED HAZARDS:**
⇒ Exothermic reaction at ambient temperatures (releases heat)
⇒ Reaction liberates gaseous products and may cause pressurization
⇒ Reaction may be particularly intense, violent, or explosive
⇒ Reaction products may be corrosive
⇒ Reaction products may be toxic
- **POTENTIAL GASES:**
⇒ Acid Fumes
⇒ Base Fumes
⇒ Nitrogen Oxides

SULFURIC ACID -

- **PREDICTED HAZARDS:**
→ May be hazardous but unknown
- **POTENTIAL GASES:**
→ No gases predicted.

SULFURIC ACID, FUMING mixed with itself -

- **INTRINSIC REACTIVE HAZARDS:**
→ No reaction expected.

— END OF HAZARDS FOR THIS ITEM —

20

SULFURIC ACID, SPENT mixed with

ACETIC ACID, GLACIAL -

- **PREDICTED HAZARDS:**
⇒ Exothermic reaction at ambient temperatures (releases heat)
⇒ Reaction liberates gaseous products and may cause pressurization
⇒ Reaction products may be flammable
⇒ Reaction products may be toxic
- **POTENTIAL GASES:**
⇒ Carbon Dioxide
⇒ Carbon Monoxide
⇒ Chlorine Dioxide
⇒ Halogen Oxides
⇒ Nitrogen Oxides
⇒ Sulfur Oxides

AIR, COMPRESSED -

- **PREDICTED HAZARDS:**
→ May be hazardous but unknown
- **POTENTIAL GASES:**
→ No gases predicted.

MANGANESE(II) SULFATE MONOHYDRATE -

- **PREDICTED HAZARDS:**
⇒ Exothermic reaction at ambient temperatures (releases heat)
- **POTENTIAL GASES:**
⇒ No gases predicted.

NITROGEN -

- PREDICTED HAZARDS:**
→ No known hazardous reaction
- POTENTIAL GASES:**
→ No gases predicted.

P-NITROTOLUENE -

- **PREDICTED HAZARDS:**
⇒ Reaction liberates gaseous products and may cause pressurization
⇒ Reaction may be particularly intense, violent, or explosive
⇒ Reaction products may be explosive or sensitive to shock or friction
⇒ Reaction products may be toxic
- **POTENTIAL GASES:**
⇒ Carbon Dioxide
⇒ Carbon Monoxide
⇒ Methylisothiocyanate
⇒ Nitrogen Oxides

21

SODIUM HYDROXIDE SOLUTION -

- PREDICTED HAZARDS:
 - ⇒ Exothermic reaction at ambient temperatures (releases heat)
 - ⇒ Reaction liberates gaseous products and may cause pressurization
 - ⇒ Reaction may be particularly intense, violent, or explosive
 - ⇒ Reaction products may be corrosive
 - ⇒ Reaction products may be toxic
- POTENTIAL GASES:
 - ⇒ Acid Fumes
 - ⇒ Basic Fumes
 - ⇒ Nitrogen Oxides

SULFURIC ACID -

- PREDICTED HAZARDS:
 - ⇒ May be hazardous but unknown
- POTENTIAL GASES:
 - ⇒ No gases predicted.

SULFURIC ACID, FUMING -

- PREDICTED HAZARDS:
 - ⇒ May be hazardous but unknown
- POTENTIAL GASES:
 - ⇒ No gases predicted.

SULFURIC ACID, SPENT mixed with itself -

- INTRINSIC REACTIVE HAZARDS:
 - ⇒ No reaction expected.

— END OF HAZARDS FOR THIS ITEM —

WATER mixed with

ACETIC ACID, GLACIAL -

- PREDICTED HAZARDS:
 - ⇒ No known hazardous reaction
- POTENTIAL GASES:
 - ⇒ No gases predicted.

AIR, COMPRESSED -

- PREDICTED HAZARDS:
 - ⇒ No known hazardous reaction
- POTENTIAL GASES:
 - ⇒ No gases predicted.

22

MANGANESE(II) SULFATE MONOHYDRATE -

- PREDICTED HAZARDS:
 - ⇒ Exothermic reaction at ambient temperatures (releases heat)
 - ⇒ Reaction liberates gaseous products and may cause pressurization
 - ⇒ Reaction products may be corrosive
- POTENTIAL GASES:
 - ⇒ Acid Fumes
 - ⇒ Hydrogen
 - ⇒ Hydrogen Halide

NITROGEN -

- PREDICTED HAZARDS:
 - ⇒ No known hazardous reaction
- POTENTIAL GASES:
 - ⇒ No gases predicted.

P-NITROTOLUENE -

- PREDICTED HAZARDS:
 - ⇒ No known hazardous reaction
- POTENTIAL GASES:
 - ⇒ Nitrogen Oxides

SODIUM HYDROXIDE SOLUTION -

- PREDICTED HAZARDS:
 - ⇒ Exothermic reaction at ambient temperatures (releases heat)
 - ⇒ Reaction liberates gaseous products and may cause pressurization
 - ⇒ Reaction products may be corrosive
 - ⇒ Reaction products may be toxic
- POTENTIAL GASES:
 - ⇒ Ammonia
 - ⇒ Base Fumes
 - ⇒ Hydrogen
 - ⇒ Oxygen

SULFURIC ACID -

- PREDICTED HAZARDS:
 - ⇒ Exothermic reaction at ambient temperatures (releases heat)
 - ⇒ Reaction liberates gaseous products and may cause pressurization
 - ⇒ Reaction products may be corrosive
 - ⇒ Reaction products may be toxic
- POTENTIAL GASES:
 - ⇒ Acid Fumes
 - ⇒ Nitrogen Oxides

23

SULFURIC ACID, FUMING -**PREDICTED HAZARDS:**

- ⇒ Exothermic reaction at ambient temperatures (releases heat).
- ⇒ Reaction liberates gaseous products and may cause pressurization.
- ⇒ Reaction products may be corrosive.
- ⇒ Reaction products may be toxic.

POTENTIAL GASES:

- ⇒ Acid Fumes
- ⇒ Nitrogen Oxides

SULFURIC ACID, SPENT -**PREDICTED HAZARDS:**

- ⇒ Exothermic reaction at ambient temperatures (releases heat).
- ⇒ Reaction liberates gaseous products and may cause pressurization.
- ⇒ Reaction products may be corrosive.
- ⇒ Reaction products may be toxic.

POTENTIAL GASES:

- ⇒ Acid Fumes
- ⇒ Nitrogen Oxides

WATER mixed with itself -**INTRINSIC REACTIVE HAZARDS:**

- ⇒ No reaction expected.

TRANSFORMATION - IF ANY, WHICH COULD OCCUR

SN.	NAME	DECOMPOSITION/ COMBUSTION PRODUCTS
1	Oleum (63% SO ₃)	Oxides of Sulfur, Irritating and toxic fumes and Hydrogen gas.
2	Para-Nitro Toluene.	Carbon Dioxide, Carbon Monoxide & Nitrogen Oxides.
3	Sodium Dithionite.	May decompose on exposure to air and moisture.
4	Sodium Hydroxide.	Sodium Oxide. Decomposition by reaction with certain acids releases flammable and explosive Hydrogen gas.
5	Sulphuric Acid.	Toxic fumes of Oxides of Sulfur when heated to decomposition. Will react with water or steam to produce toxic and corrosive fumes.

SECTION 4: HAZOP WORKSHEETS

28

NODE 1 OF 3 : SULFONATION.	SUB NODE 1.1: P & ID - SULFONATION SR1 & SR2.								
DESIGN INTENT : PROCESS OPERATIONS AS DETAILED IN THE SECTION 2.									
Guide Word	Parameter	Deviation	Cause	Consequence	Protection Measures	S	P	R	Action Suggested
None.	Flow:	No flow of PNT during transfer to SR1/ SR2 during batch charging.	No material in the storage tank.	Delayed operation.	PIC.	3	3	9	SDH for blockage removal operation.
			Valve failure/ blockage.	Spill hazard during blockage removal operation.	Log book record.	4	4	16	Keep antidote like Methylene Blue in stock.
			Line blockage due to PNT (flanging joint 52°C) solidification.	Exposure to PNT vapors. Quantities likely.	Jacketed PNT transfer lines with heating arrangement.				Safety shower and eye wash fountain.
			Transfer pump failure (loss of power, impeller came off or corroded etc.).	Delayed operation.	TL. PPL. Training.	3	3	9	
	Human error.		Supervision.						
			Preventive maintenance.						
None.	Flow:	More flow of Oleum from Oleum storage tank to DT1 Oleum measure tank.	Valve failure.	Oleum overflow from DT1 vent.	Supervision.	4	4	16	Consider some of the available options like:
			Human error.	Spill hazard.	Training.				<ul style="list-style-type: none"> ▪ Transfer pump emergency stop push button located near DT1 for operator. ▪ Connecting the DT1 overflow line back to the Oleum storage tank.
			Toxic gas release.	Isolation valve in receipt line over DT1.					

29

NODE 1 OF 3 : SULFONATION.			SUB NODE 1.1: P & ID - SULFONATION SR1 & SR2.						
DESIGN INTENT : PROCESS OPERATIONS AS DETAILED IN THE SECTION 2.									
Guide Word	Parameter	Deviation	Cause	Consequence	Protection Measures	S	P	R	Action Suggested
More.	Flow.	More flow of Oleum from DT1 Oleum measure tank to Sulfonator.	Valve failure. Human error in manual control of addition by valve.	Entire contents of measure tank may be added to reactor. Unsafe condition.	SG in feed line. Supervision.	4	4	16	Consider some of the available options like: <ul style="list-style-type: none">Instrumentation for flow control.Rotameter.Metering pump.Provision of orifice plate in feed line restricting flow to desired limit.Addition in small lots.
Less.	Flow.	Less flow of reaction mass from SR1 / SR2 to crystallizers.	Batch transfer is by compressed air. Malfunctioning / failure of air supply. During transfer operation.	Delayed operation. Emergency power. Supervision.	PIC.	3	3	9	
Reverse.	Flow.	Reverse flow in compressed air line.	Compressed air connection to sulfonator. Air supply failure or pressurization in reactor simultaneously isolation valve passing.	Acidic vapors ingress in air line. Contaminated air in header may be detrimental to other operations.	Preventive maintenance.	4	3	12	Consider NRV in CA feed line over sulfonator.

30

NODE 1 OF 3 : SULFONATION.			SUB NODE 1.1: P & ID - SULFONATION SR1 & SR2.						
DESIGN INTENT : PROCESS OPERATIONS AS DETAILED IN THE SECTION 2.									
Guide Word	Parameter	Deviation	Cause	Consequence	Protection Measures	S	P	R	Action Suggested
As Well As.	Flow.	Acidic vapors along with non condensable in vent.	Acid vapors (largely Sulfuric Acid and unreacted sulfonating agent arising from the use of an excess to drive the reaction).	Toxic gas release at vent.	-	4	4	16	SR1 and SR2 vent going outside building as per P & I Diagram. Vent header going to scrubber is advisable.
AS Well As.	Flow.	Fugitive emission.	Piping leak. Pump gland leak. Gasket failure. Sampling. Vent release. Reactor gland leak.	Air pollution issues. VOC emissions at work place. Health hazard.	Regular maintenance of valves, pumps, flanges, joints and other equipment. Closed charging arrangement at reactor and operation with proper maintenance of pressure and temperature. Double mechanical seals in pumps.	4	3	12	LDAR (Leak Detection and Repair) system to monitoring, testing and maintenance. Monitoring of air born concentration of chemicals in work environment within the prescribed limits. Medical surveillance of workers and antidotes. Splash guards over flange joints carrying corrosive materials acid/ alkali under pressure.
Other Than.	Flow.	Unintended / undesired flow of materials.	Wrong operation. valve. Human error.	Accidental mix up. Unsafe condition depending upon materials involved.	Dedicated piping. Color code for piping.	3	3	9	

31

NODE 1 OF 3 : SULFONATION.			SUB NODE 1.1: P & ID - SULFONATION SR1 & SR2.						
DESIGN INTENT : PROCESS OPERATIONS AS DETAILED IN THE SECTION 2.									
Guide Word	Parameter	Deviation	Cause	Consequence	Protection Measures	S	P	R	Action Suggested
More.	Temperature.	More temperature at reactor.	Faster addition of controlled reactant. Accumulation of reactant on loss of turbulence. Reaction exotherm. Accidental mix up. Ti malfunctioning. Human error. Power failure and loss of cooling.	Temperature uncontrolled rise. Run away reaction.	Regular calibration of instrumentation.	4	3	12	Temperature control instrumentation high temperature interlock with feed with alarm.
Less.	temperature.	Less ambient temperature of Oleum vapors trapped in transfer line.	Winter season the site under consideration is having history of low ($<4^{\circ}\text{C}$) temperature Sulfur Trioxide vapors trapped in transfer line.	Oleum freezing (65%) Oleum melting point 50°C . Unsafe condition during melting operating likely. See Note 1.	Supervision.	5	4	20	-

NOTE NO. 1: SULFUR TRI OXIDE ISOMERS MELTING

When the alpha form melts it takes the gamma form and vapor pressure rises dramatically with a hazard of explosion. Melting point is $62.33 \text{ & } 17^{\circ}\text{C}$ for alpha, beta & gamma forms respectively. Vapour pressure is $9.7, 45.9 \text{ & } 57.7 \text{ kPa}$ at 25°C for alpha, beta & gamma forms respectively.

32

NODE 1 OF 3 : SULFONATION.			SUB NODE 1.1: P & ID - SULFONATION SR1 & SR2.						
DESIGN INTENT : PROCESS OPERATIONS AS DETAILED IN THE SECTION 2.									
Guide Word	Parameter	Deviation	Cause	Consequence	Protection Measures	S	P	R	Action Suggested
More.	Pressure.	More pressure at reactor.	Faster addition of controlled reactant. Accumulation of reactant on loss of turbulence. Uncontrolled reaction. Exotherm. Accidental mix up. Ti malfunctioning.	Fire/ explosion hazard. Health hazard.	Preventive maintenance. Regular calibration of instrumentation. Scrubber. Emergency instructions.	5	4	20	Provide rupture disc (RD) on the reactor in addition to the usual spring-loaded safety valve. The vent line leading from Rupture disc should be taken out of the plant (having minimum resistance at the time of blowing) to dump tank for total containment. Fast relief at 10% over-pressure by SRV. Instrumentation high pressure interlock with feed with alarm. Update P & ID showing only RD; consider corrosion aspect of materials handled and for SRV/RD combination.
Less.	Pressure.	Less pressure.	Vacuum in the system. Fast pumping out and vent closed. Fast cooling, vent closed.	Not significant.	Equipments are designed for vacuum.	-	-	-	-

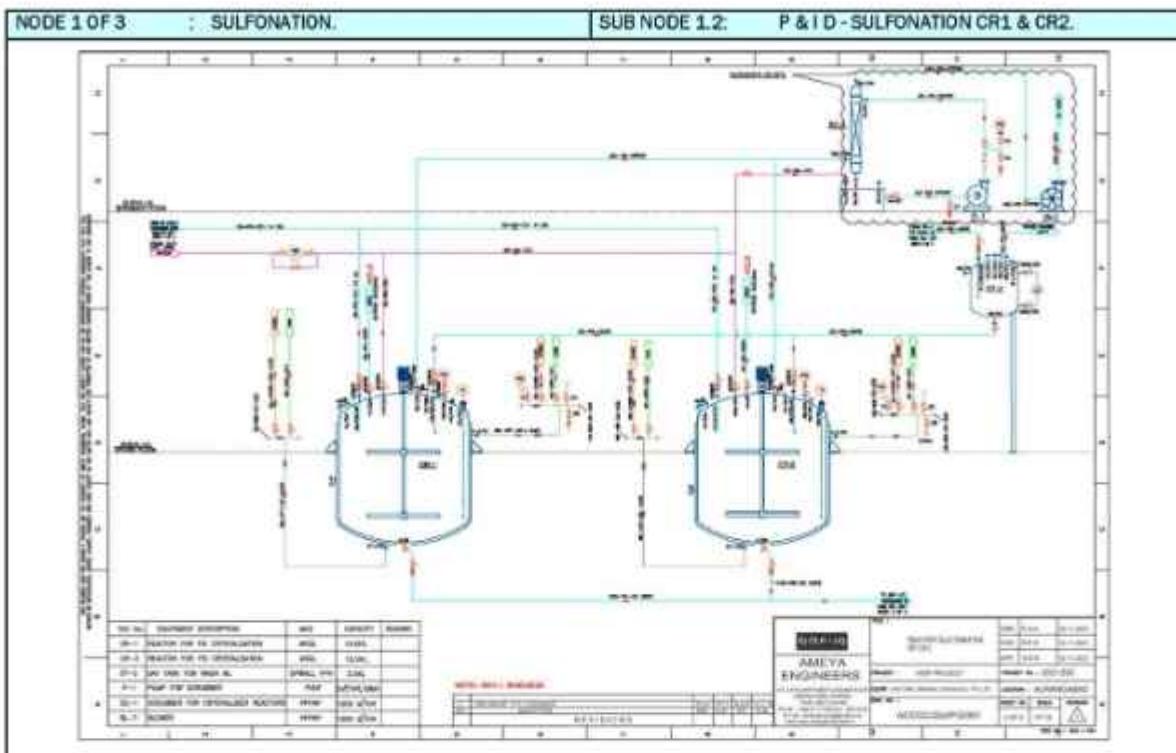

33

NODE 1 OF 3 : SULFONATION.			SUB NODE 1.1: P & ID- SULFONATION SR1 & SR2.						
DESIGN INTENT : PROCESS OPERATIONS AS DETAILED IN THE SECTION 2.									
Guide Word	Parameter	Deviation	Cause	Consequence	Protection Measures	S	P	R	Action Suggested
None.	Turbulence.	Loss of turbulence in reactor.	Agitator failure. Mechanical agitation failure, on account of broken shaft, broken blades, falling of blades or such other contingencies.	Loss of turbulence in reactor. Disturbed operation.	Supervision. Preventive maintenance.	4	4	16	Instrumentation interlock with feed in case agitation failure. Consider signal for interlock from no load current and not on only power supply current.
As Well As.	Composition.	Impurities side reaction products. Isomers by-products formation.	Poor mixing in bottom dish. Poor tip speed of agitator for required shear force. Local temperature difference pockets. Addition of controlled reactant not by dip pipe. Reduced batch size.	Disturbed operation. Details not fully studied at this stage.	Supervision.	4	4	16	Review agitator design, baffles, location of TI. Addition dip pipe. Obtain MSDS of intermediates, side reaction products, isomers, decomposition products etc. if any. In absence of adequate information the material should be considered as hazardous material. Impurities may accumulate to detrimental level in recycle stream (as ML used in washings) unless adequate purge not considered.

34

NODE 1 OF 3 : SULFONATION.			SUB NODE 1.1: P & ID- SULFONATION SR1 & SR2.						
DESIGN INTENT : PROCESS OPERATIONS AS DETAILED IN THE SECTION 2.									
Guide Word	Parameter	Deviation	Cause	Consequence	Protection Measures	S	P	R	Action Suggested
More.	Phase.	More number of phases.	Air lock in cooling water system at sulfonator.	Poor cooling. Disturbed operation.	-	3	3	6	Air lock removal valve. Update P & I Diagram.
More.	Level.	More level at DTI.	Covered under more flow.	-	-	-	-	-	-
Less.	Level.	Less Level in DTI.	Human error.	Disturbed operation.	16.	3	3	9	LG over DTI and drain valve for LG. Update P & I Diagram.
Other.	Maintenance.	Cleaning of the piping/ tank/ equipments.	Inspection, repair, maintenance work. External corrosion.	Residual vapors in the equipment/ piping fire hazard. Health hazard.	SOP. Supervision.	3	3	9	Work permit.
Other.	Design.	P & I Diagrams.	Total 6 number of significant vents (RD, reactor, measure tank) located outside building in this P & I Diagram.	Toxic gas release in plant. Unsafe condition.	-	4	4	16	Need for connecting vent to header and to proper disposal system like scrubber. Update P & I Diagrams accordingly.

35

36

NODE 1 OF 3 : SULFONATION.			SUB NODE 1.2: P & I D - SULFONATION CR1 & CR2.						
DESIGN INTENT : PROCESS OPERATIONS AS DETAILED IN THE SECTION 2.									
Guide Word	Parameter	Deviation	Cause	Consequence	Protection Measures	S	P	R	Action Suggested
None.	Flow.	No flow.	-	-	-	-	-	-	-
More.	Flow.	More flow of vent gases at CR1/CR2.	Compressed air used for batch transfer from SR1/ SR2 is released at the vent of CR1/CR2.	Large volume of vent gases loaded with toxic fumes and organic traces released.	Vent connected to scrubber SC1.	4	4	16	Provide adequate capacity of scrubber to handle the vent gases from CR1/CR2.
Less.	Flow.	Less flow.	-	-	-	-	-	-	-
As Well As.	Flow.	Emission at scrubber tank vent.	In absence of 'U' seal, gases are likely to take least resistance path.	Emission at the vent of SC1 circulation tank vent.	-	4	4	16	Provide 'U' seal at scrubber. Update P & I Diagram.
As Well As.	Flow.	Toxic gas release at vent.	Scrubber malfunctioning (loss of circulating solution, 98% Sulfuric Acid power failure etc.).	Release of toxic gases at scrubber vent. Pollution. Environmental issues.	Supervision.	4	4	16	Leak detection at vent of scrubber.
Other.	Flow.	Static charge.	-	-	-	-	-	-	-
Other Than.	Flow.	In intended flow at CR1/ CR2.	Leak at CR1/ CR2 in chilled water side. Corrosion. Poor maintenance.	Ingress of chilled water in the crystallizers. MOC of CR1/CR2 is 55.	Supervision. Preventive maintenance.	3	3	9	Periodic testing of the crystallizers jacket/ coil/ shell by competent person.
More.	Temperature.	More temp.	-	-	-	-	-	-	-
Less.	Temperature.	Less temperature.	-	-	-	-	-	-	-

37

NODE 1 OF 3 : SULFONATION.			SUB NODE 1.2: P & I D - SULFONATION CR1 & CR2.						
DESIGN INTENT : PROCESS OPERATIONS AS DETAILED IN THE SECTION 2.									
Guide Word	Parameter	Deviation	Cause	Consequence	Protection Measures	S	P	R	Action Suggested
More.	Pressure.	More pressure.	-	-	-	-	-	-	-
Less.	Pressure.	Less pressure.	-	-	-	-	-	-	-
As Well As.	Composition.	Accumulation of impurities in the wash ML at DT2 recycle streams. Rust, dirt etc.	Side reaction products (if any) likely to accumulate in the recycle cut.	Unsafe condition.	Process control check. Dedicated piping. Supervision. Strainer.	4	4	16	Monitor the impurity profile and purge level in recycle stream to avoid built up of impurity to detrimental level.
More.	Phase.	More number of phases.	At Crystilizer solids formed are likely to settle in bottom nozzle, blockage.	Spill hazard during blockage removal operation.	PPE High type bottom valve provided.	4	3	12	-
None.	Flow.	No flow of air for batch transfer.	Air supply failure. Power failure.	Delayed operation.	Emergency power DG set. Preventive maintenance.	3	3	9	-
Less.	Flow.	less flow of material transfer from CR1/ CR2 to ANF.	Air supply malfunctioning.	Delayed operation.	Emergency power DG set. Preventive maintenance.	3	3	9	Consider gravity flow as CR1/ CR2 are located at third floor and ANF 1 and ANF 2 are located at second floor.
More.	Temperature.	More temperature at CR1/ CR2.	Cooling water supply malfunctioning.	Disturbed operation.	Supervision. II in GWS.	3	3	9	-
Less.	Temperature.	Less temperature.	Human error.	Not significant as freezing not likely.	-	-	-	-	-

38

NODE 1 OF 3 : SULFONATION.			SUB NODE 1.2: P & I D - SULFONATION CR1 & CR2.						
DESIGN INTENT : PROCESS OPERATIONS AS DETAILED IN THE SECTION 2.									
Guide Word	Parameter	Deviation	Cause	Consequence	Protection Measures	S	P	R	Action Suggested
More.	Pressure.	More pressure.	Flooding at scrubber back pressure or blockage in vent line.	Disturbed operation.	Supervision.	3	3	9	Consider trap in vent line to avoid any solids going in vent system.
Less.	Pressure.	Less pressure.	Vacuum in the system. Fast pumping out and vent closed. Fast cooling, vent closed.	Not significant.	Equipments are designed for vacuum.	-	-	-	-
More.	Level.	More level at scrubber tank.	More feed in error. Human error.	Over flow of tank. Spill hazard at third floor. Unsafe condition.	Supervision. Log book record.	3	3	9	-
Less.	Level.	Less level.	Human error.	Circulation pump starving.	Supervision. Log book record.	3	3	9	Consider L6 for scrubber tank.
Other.	Maintenance.	Repair / inspection over equipments.	Cleaning of the equipments. Residual toxic gas inside.	Health hazard.	Work permit.	3	3	9	Ensure positive isolation of piping connection before vessel entry.

39

The diagram illustrates the process flow for sulfonation across three horizontal tanks (HT1, HT2, HT3). The flow starts from the left, enters HT1, and then moves to HT2. From HT2, it splits into two paths: one leading to HT3 and another leading to a pump. The pump then feeds into HT3. Various valves, pressure gauges, and temperature sensors are installed along the lines to monitor and control the process. A small vessel labeled 'V1' is also shown connected to the system.

40

NODE 1 OF 3 : SULFONATION			SUB NODE 1.3:	P & I D - SULFONATION HT1, HT2 & HT3.					
DESIGN INTENT		PROCESS OPERATIONS AS DETAILED IN THE SECTION 2.							
Guide Word	Parameter	Deviation	Cause	Consequence	Protection Measures	S	P	R	Action Suggested
Less.	Flow.	Less flow during batch transfer.	HDPE line leak, as poor support/vibration/ abuse.	Spill hazard.	-	3	3	9	Support to HDPE lines. Pre-fabricated coated piping option may be considered.
Less.	Flow.	No flow of material transfer from CR1/ CR2 to ANF.	No material in CR1/ CR2. Air supply malfunctioning.	Delayed operation.	LG over crystallizer. Emergency power D6 set. Preventive maintenance.	3	3	9	Consider gravity flow as CR1/ CR2 are located at third floor and ANF 1 and ANF 2 are located at second floor.
More.	Flow.	More flow of vent gases at ANF 1 and ANF 2.	Compressed air used for batch transfer released at the vent of ANF 1 and ANF 2.	Large volume of vent gases loaded with toxic fumes and organic traces released.	Vent connected to scrubber.	4	4	16	Provide adequate capacity of scrubber to handled the vent gases from ANF 1 and ANF 2.
Reverse.	Flow.	Reverse flow at pump PA discharge line.	Power failure, line material flowing back.	Disturbed operation.	NRV provided in pump discharge line.	3	3	9	-
As Will As.	Flow.	As well as flow of material in filtrate at ANF.	Bag torn of the filter.	Disturbed operation.	Supervision.	3	3	9	-
Other Than.	Flow.	Acidic spill on floor.	Spill of acidic material on flooring of filter press.	Unsafe condition. Building foundation damage in long run.	Acid proof tile flooring. Safety shower and eye wash fountain.	4	4	16	-
More.	Temperature.	More temperature.	More ambient temperature.	Not significant.	-	-	-	-	-

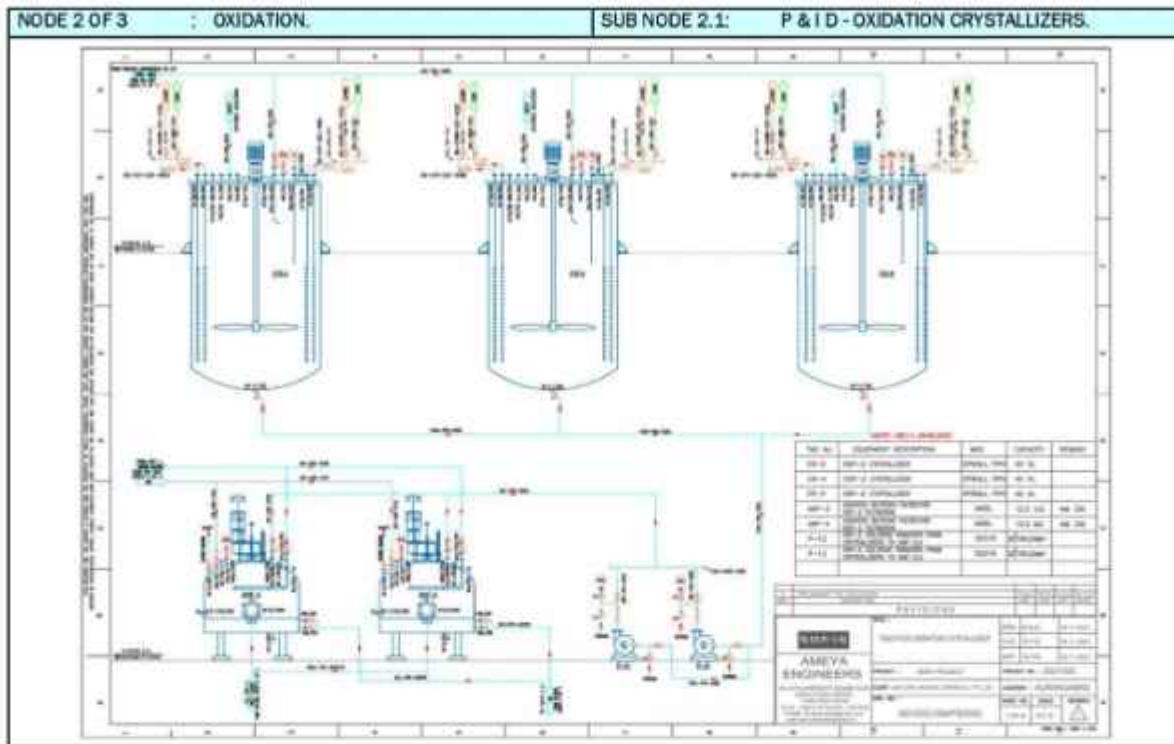

41

NODE 1 OF 3 : SULFONATION.			SUB NODE 1.3: P & I D - SULFONATION HT1, HT2 & HT3.						
DESIGN INTENT : PROCESS OPERATIONS AS DETAILED IN THE SECTION 2.									
Guide Word	Parameter	Deviation	Cause	Consequence	Protection Measures	S	P	R	Action Suggested
Less.	Temperature.	Less temperature.	Less ambient temperature.	Not significant.	-	-	-	-	-
More.	Pressure.	More pressure at pump P-5.	HDPE line joints leak if not properly maintained.	Spill hazard.	Support for HDPE lines. Preventive maintenance.	3	3	3	-
Less.	Pressure.	Less pressure.	Vacuum in the ANB system. Fast pumping out and vent closed. Fast cooling, vent closed.	Not significant.	Equipments are designed for vacuum.	-	-	-	-
As Well As.	Composition.	Change in composition.	Loss of turbulence in reactor.	-	-	-	-	-	-

42

NODE 1 OF 3 : SULFONATION.			SUB NODE 1.3: P & I D - SULFONATION HT1, HT2 & HT3.						
DESIGN INTENT : PROCESS OPERATIONS AS DETAILED IN THE SECTION 2.									
Guide Word	Parameter	Deviation	Cause	Consequence	Protection Measures	S	P	R	Action Suggested
More.	Phase.	More number of phases.	At HT1 solids are likely to settle in bottom nozzle blockage.	Spill hazard during blockage removal operation.	PPE. Flush type bottom valve provided.	4	3	12	-
More.	Level.	More level in ML collection tank.	ML from filter press collected.	Overflow. Spill hazard.	-	-	-	-	Update P & I Diagram the disposal/ transfer route for ML from filter press.
Less.	Level.	Less level in reactor.	Reduced trial batch size. Human error.	Thermowell may not dip. No agitation in bottom dish material. Unstable condition.	Supervision.	4	4	16	Check heat removal capacity of the reactor adequate for the required reaction exotherm. The reactor volume is function of cube of radius whereas heat transfer area is function of square of the radius.
Other.	Maintenance.	Repair / inspection over equipments.	Cleaning of the equipments. Residual toxic gas inside.	Health hazard.	Work permit.	3	3	9	Ensure positive isolation of piping connection before vessel entry.

43

Other.	Flow.	Release of liquid/vapors.	Pump land leak, Gasket failure, Sampling, Vent release.	Spill release of Acetic Acid vapors, Formation of flammable mixture with air.	Fire/explosion hazard if finds source of ignition, See Note 2., Portable fire extinguishers.	4	3	12	Monitor the work place air born concentration of chemicals within prescribed limit, Provide leak detection system.
Other.	Flow.	Release of liquid/vapors.	Pump land leak, Gasket failure, Sampling, Vent release.	Spill release of Acetic Acid vapors, Formation of flammable mixture with air.	Fire/explosion hazard if finds source of ignition, See Note 2., Portable fire extinguishers.	4	3	12	Monitor the work place air born concentration of chemicals within prescribed limit, Provide leak detection system.

NOTE NO. 2: IGNITION SOURCES

	FIRE TRIANGLE: There are three conditions essential for a fire. <ul style="list-style-type: none"> • Fuel, • Oxygen, & • Heat. These three conditions are often represented as the Fire Triangle shown in the figure. If one of the conditions is missing, fire does not occur; if one of them is removed, fire is extinguished.		An explosion occurs if a fuel is present in mixture with air (i.e. sufficient Oxygen) within the explosion limits, together with a source of ignition.
--	--	--	--

At the site air is present all the time, accidental spill of flammable material is credible scenario hence eliminating the source of ignition is the only control to avoid any fire/ explosion hazard.

61

IGNITION SOURCES (ATEX: Standard EN 1127-1).

Sr. No.	Ignition Source	Predominantly Of Electric Origin	Predominantly Of Nonelectric Origin

NODE 3 OF 3 : REDUCTION.			SUB NODE 3.1: P & I D - REDUCTION REACTORS & P25 & P26.						
DESIGN INTENT : PROCESS OPERATIONS AS DETAILED IN THE SECTION 2.									
Guide Word	Parameter	Deviation	Cause	Consequence	Protection Measures	S	P	R	Action Suggested
Other:	How,	Static discharge.	Static sensitive material. Acetic Acid transfer by pump. Free fall of Acetic Acid in the vessel. See Note 3.	Static discharge as source of ignition in case of any spill and vapors coming in flammable range with air. Fire/ explosion hazard.	Supervision. Dip pipe provided in feed lines. Equipments are earthed.	5	4	20	Provide effective measures for prevention of accumulation of static charge to a dangerous extent. See Note 3.

62

NOTE 3: STATIC CHARGE AS A SOURCE OF IGNITION

	<p>Static charge to become source of ignition following conditions to be fulfilled simultaneously;</p> <ul style="list-style-type: none"> • A Flammable Atmosphere. • Charge Generation. (7 methods). • Charge Accumulation. (6 factors) • An Incendiary Discharge (having energy greater than the MIE of the flammable atmosphere). (6 methods). 	<p>Therefore, control of static charge as source of ignition/ explosion is accomplished by at least any one of these FOUR factors.</p> <ul style="list-style-type: none"> • Elimination of a flammable atmosphere. • Control of charge generation. • Control of charge accumulation. • Minimization of incendiary discharge.
--	---	--

Electrostatic Charging Mechanism	Factors That Influence The Magnitude Of Charge Accumulation	Electrostatic Discharge Mechanisms
1. Contact and Separation.	1. Temperature of the surface.	1. Spark Discharge/ Capacitor Discharge.
2. Induction.	2. Permittivity.	2. Brush Discharge.
3. Double layer separation.	3. Number and density of contacts points.	3. Corona Discharge.
4. Charge sharing (mists & dusts).	4. Electrical conductivity.	4. Propagating Discharge.
5. Corona charging.	5. Speed of separation.	5. Bulking Brush Discharge.
6. Diffusion charging (collision between particles & ions in a gas).	6. Changes in the condition of the materials.	6. Lighting Discharge.
7. Particle capture.		

63

NODE 3 OF 3 : REDUCTION.			SUB NODE 3.1: P & I D - REDUCTION REACTORS & P25 & P26.						
DESIGN INTENT : PROCESS OPERATIONS AS DETAILED IN THE SECTION 2.									
Guide Word	Parameter	Deviation	Cause	Consequence	Protection Measures	S	P	R	Action Suggested
More.	Temperature.	More temperature at reactor.	Faster addition of controlled reactant. Accumulation of reactant on loss of turbulence. Reaction exotherm. Accidental mix up. Ti malfunctioning. Human error. Power failure and loss of cooling.	Temperature uncontrolled rise. Run away reaction.	Regular calibration of instrumentation.	4	3	12	Temperature control instrumentation high temperature interlock with feed with alarm.
Less.	Temperature.	Less temperature of Acetic Acid.	Winter season Freezing of material e.g. Acetic Acid Glacial (melting point 16.7°C).	Not significant as dilute Acetic Acid used.	Supervision. Acetic Acid dilute used.	3	3	9	
Less.	Temperature.	Less temperature of Acetic Acid.	Winter season Freezing of material e.g. Acetic Acid Glacial (melting point 16.7°C).	Not significant as dilute Acetic Acid used.	Supervision. Acetic Acid dilute used.	3	3	9

Less.	Pressure.	Less pressure.	Vacuum in the system.	Not significant.	Equipments are designed for vacuum.	-	-	-	
			Fast pumping out and vent closed.						
			Fast cooling, vent closed.						
More.	Phase.	More number of phases.	Solids accumulating at H16.	Disturbed operation.	Supervision.	3	3	9	
More.	Level.	More level at HT4/ HT5.	More feed in error.	Overflow at HT4/ HT5.	Supervision.	4	4	16	Contain any accidental spill for safe disposal and route floor washings through EIP.
				Spill hazard.					Avoid any organic contaminated water entering storm drain.
Less.	Level.	Less level at HT6.	P - 24 suction starving.	Disturbed operation.	LH at H16.	3	3	9	Drain valve for LG.
Other.	Maintenance.	Repair / inspection over equipments.	Cleaning of the equipments.	Health hazard.	Work permit.	3	3	9	Ensure positive isolation of piping connection before vessel entry.
			Residual toxic gas inside.						

73

74

NODE 3 OF 3 : REDUCTION. | SUB NODE 3.4: P & I D - REDUCTION SPIN FLASH DRYER.

DESIGN INTENT : PROCESS OPERATIONS AS DETAILED IN THE SECTION 2.

Guide Word	Parameter	Deviation	Cause	Consequence	Protection Measures	S	P	R	Action Suggested
Less.	Flow.	Less flow of hot oil supply.	Hot oil system malfunctioning.	Disturbed operation.	Supervision.	3	3	9	-
As Well As.	Flow.	As well as flow of dust in vent.	Bag torn of the bag filter.	Disturbed operation.	Supervision.	3	3	9	-
Other.	Flow.	Static charge.	Powder transfer operations.	Unsafe condition.	Equipments are earthed.	4	4	16	-
As Well As.	Composition.	Residual Acetic Acid traces in feed to SFD.	Incomplete washing step at ANF. Acetic Acid traces entering feed of SFD.	Smoldering at bag house. Unsafe condition. Fire/ explosion hazard. In presence of fine powder hybrid mixture formation is likely increasing the explosion hazard.	Equipments are earthed.	5	4	20	Provide effective measures for prevention of accumulation of static charge to a dangerous extent. Electrical as per electrical area classification. See Note 4. Ensure no Acetic Acid traces left in the feed to SFD. Vacuum to ANF may be considered and introduce process control check at this step.

75

ELECTRICAL AREA CLASSIFICATION		INGRESS PROTECTION (IP) Solids and powders are used at site specify IP Types and Protection Details:					
All electrical devices are inherent ignition sources. Special design features are required to prevent the ignition of flammable vapors and dusts.	Selection Criteria of electrical equipments in hazardous areas; <ul style="list-style-type: none"> Gas Grouping (based on ignition energy). Temperature Classification. Classified Zones. 	(Degree of Protection of persons against contact with or moving parts inside the enclosure & Protection Of Equipment against Solid Ingress)					
Out of the three aspects in electrical area classification; first two i.e. group of materials handled and 'T' rating being property of the material we do not have any control over it the key being Zoning there by reduction in probability of the existence of a Flammable Atmosphere in the vicinity of the charged liquid.		0	No protection.	0	No protection.		
		1	Objects greater than 50 mm.	1	Vertically dripping.		
		2	Objects greater than 12 mm.	2	Angular dripping.		
		3	Objects greater than 2.5 mm.	3	Sprayed water.		
		4	Objects greater than 1.0 mm.	4	Splashed water.		
		5	Dust - protected.	5	Water jets.		
		6	Dust tight.	6	Heavy seas.		
				7	Effects of immersion.		
				8	Indefinite immersion.		
The fire and explosion hazard is directly proportional to the number and type of electrically powered devices in a process area. The overall classification is only as good as the piece of equipment in an area with the lowest classification.							

NODE 3 OF 3 : REDUCTION.			SUB NODE 3.4: P & I D - REDUCTION SPIN FLASH DRYER.						
DESIGN INTENT : PROCESS OPERATIONS AS DETAILED IN THE SECTION 2.									
Guide Word	Parameter	Deviation	Cause	Consequence	Protection Measures	S	P	R	Action Suggested
As Well As.	Composition.	Powder in the vent exhaust gases.	Filter cloth damaged at bag house. Filter bag is not properly placed or turned up.	In case of hybrid mixture formation dust explosion likely. See Note 5.	Instrumentation on panel.	3	3	9	Dust detector in the vent.

76

NOTE NO. 5: HYBRID MIXTURES							
Dust suspensions in air containing a proportion of flammable gas or Vapour are frequently termed "hybrid mixtures".		<ul style="list-style-type: none"> Handling non-flammable dusts or granules can also present an electrostatic hazard if a flammable gas or Vapour is present. Dust mixtures and gas mixtures in non-flammable concentrations can form explosive hybrid mixtures when combined. A flammable dust mixed with a flammable gas and air will explode more violently than in air alone even if the gas concentration is below the LFL. A dispersion of flammable dust that is too coarse to be explosive may be rendered explosive by addition of a small quantity of flammable gas or Vapour. 				Low energy electrostatic discharges that would not be capable of igniting a flammable dust dispersion may ignite a hybrid mixture of that dust even when the concentration of the gas or Vapour component is below its LFL.	
The occurrence of hybrid mixtures in industrial plant is an increased danger even when the concentration of flammable gases or Vapours in itself is below the LFL.							

NODE 3 OF 3 : REDUCTION.			SUB NODE 3.4: P & I D - REDUCTION SPIN FLASH DRYER.						
DESIGN INTENT : PROCESS OPERATIONS AS DETAILED IN THE SECTION 2.									
Guide Word	Parameter	Deviation	Cause	Consequence	Protection Measures	S	P	R	Action Suggested

Guide Word	Parameter	Deviation	Cause	Consequence	Protection Measures	S	P	R	Action Suggested
Other.	Hazardous chemicals.	Handling of powders.	Handling of powder at packing and SFD section.	Dust explosion hazard. See Note 6.	-	5	4	20	Safety class of powder handled not known. Powder safety tests are advisable so that safety precautions as required for that safety class of powder are applicable can be suggested. Explosion vent located at safe place.
Other.	Bought out.	P & I Diagrams of bought out.	SFD is bought out equipment.	P & I D not available.	-	4	4	16	Any bought equipment like SFD, identification of Hazop Study report and operating manual is to be insisted from the supplier. Q.3: Is SFD equipment Hazop Study report from supply available?
Other.	Maintenance.	Repair / inspection over equipments.	Cleaning of the equipments. Residual toxic gas inside.	Health hazard.	Work permit.	3	3	9	Ensure positive isolation of piping connection before vessel entry.

78

NOTE NO. 6: DUST EXPLOSION	
 <p>The diagram shows a yellow pentagon divided into five segments, each labeled with one of the five conditions for dust explosion:</p> <ul style="list-style-type: none"> Top segment: Ignition source Top-right segment: Confinement Bottom-right segment: Oxygen in the air Bottom-left segment: Combustible dust Bottom-center segment: Dispersion 	<p>Dust explosions can occur when the following conditions are satisfied simultaneously:</p> <ul style="list-style-type: none"> The dust must be flammable. The particle size distribution must be capable of propagating flame. The dust concentration must fall within the Flammable Range. The air must contain sufficient oxygen to support combustion. <p>The dust suspension must be in contact with an ignition source of sufficient energy.</p> <p>DUST EXPLOSIBILITY Some factors which influence dust explosibility are:</p> <ol style="list-style-type: none"> (1) Chemical composition; (2) Particle size; (3) Moisture content; (4) Oxygen concentration; (5) Inert gas; (6) Admixed inert dust concentration.
<p>Therefore, control of dust explosion is accomplished by at least any one of these five factors.</p>	<p>Moisture content has a strong effect on dust explosibility, although the effect is generally weak for moisture contents below 10%. At the other end of the range, dust with a moisture content greater than 30% is unlikely to be responsible for initiation of an explosion.</p>

79

SECTION 5: LIST OF ACTION SUGGESTED

SN.	ACTION SUGGESTED	REF NODE
1	Oleum measure tank DT1 overflow while receipt of Oleum from storage tank leads to unsafe condition in plant. Consider some of the available options like; <ul style="list-style-type: none">▪ Transfer pump emergency stop push button located near DT1 for operator▪ Connecting the DT1 overflow line back to the Oleum storage tank	1.1
2	Instrumentation interlock with feed in case agitation failure (consider signal for interlock from no load current and not on only power supply current).	1.1
3	Review agitator design of sulfonator, baffles, location of TI, addition dip pipe.	1.1
4	Obtain MSDS of intermediates, side reaction products, isomers, decomposition products etc. if any. In absence of adequate information the material should be considered as if hazardous material.	1.1
5	Impurities may accumulate to detrimental level in recycle stream (as ML used in washings) unless adequate purge not considered.	1.1
6	Provide Air lock removal valve in cooling water loop. Update P & I Diagram.	1.1
7	LG over DT1 and drain valve for LG. Update P & I Diagram.	1.1
8	Work permit.	1.1
9	Need for connecting vent to header and to proper disposal system like scrubber. Update P & I Diagrams accordingly.	1.1
10	Sulfonator flow control in addition to manual valve control Consider some of the available options like; <ul style="list-style-type: none">▪ Instrumentation for flow control.▪ Rotameter.▪ Metering pump.▪ Provision of orifice plate in feed line restricting flow to desired limit.▪ Addition in small lots.	1.1
11	Sulfonator instrumentation feed cut off interlock in case high temperature, agitation failure, high pressure with alarm.	1.1
12	Consider NRV in CA feed line over sulfonator.	1.1
13	SR1 and SR2 vent going outside building as per P & I Diagram. Vent header going to scrubber is advisable.	1.1

80

SN.	ACTION SUGGESTED	REF NODE
14	LDAR (Leak Detection and Repair) system to monitoring, testing, and maintenance.	1.1
15	Provide rupture disc (RD) on the reactor in addition to the usual spring loaded safety valve. The vent line leading from Rupture disc should be taken out of the plant (having minimum resistance at the time of blowing) to dump tank for total containment). First relief at 10% overpressure by SRV, update P& ID showing only RD, consider corrosion aspect of materials handled and for SRV/ RD combination.	1.1
16	Safety shower and eye wash fountain	1.1
17	Splash guards over flange joints carrying corrosive materials acid/ alkali under pressure.	1.1
18	In view of Nitro Amino compounds handling medical surveillance of workers and keep antidote like Methylene Blue in stock	1.1
19	Monitoring of air born concentration of chemicals in work environment within the prescribed limits.	1.1
20	SOP for blockage removal operation.	1.1
21	Provide adequate capacity of scrubber to handle the vent gases from CR1/CR2.	1.2
22	Consider gravity flow as SR1/ CR2 are located at third floor and ANF 1 and ANF 2 are located at second floor.	1.2
23	Provide 'U' seal at scrubber. Update P & I Diagram.	1.2
24	Leak detection at vent of scrubber.	1.2
25	Periodic testing of the crystallizers jacket/ coil/ shell by competent person	1.2
26	Monitor the impurity profile and purge level in recycle stream to avoid built up of impurity to detrimental level.	1.2
27	Provide adequate support to HDPE lines or pre-fabricated coated piping option may be considered.	1.3
28	Update P & I Diagram the disposal/ transfer route for ML from filter press.	1.3
29	Check heat removal capacity of the reactor adequate for the required reaction exotherm especially for reduced batch/ for dish material (as The reactor volume is function of cube of radius where as heat transfer area is function of square of the radius).	1.3
30	Safety shower and eye wash fountain.	2.1
31	Periodic testing of the crystallizers coil by competent person	2.1
32	Q-1: Is there vacuum connection at ML collection compartment of ANF?	2.1

81

SN.	ACTION SUGGESTED	REF NODE
33	Q.2. ANF 3 and ANF 4 are 12.5 m ³ capacity where as crystallizers CR3/ CR4/ CR5 are 40 m ³ capacity each mismatch capacity depending time cycle may become bottle neck in plant?	2.1
34	No standby pump for P14A.	2.2
35	Consider flush type bottom valve for DIS1.	2.2
36	Review stirrer design of DIS1 to ensure mixing in dish material.	2.2
37	Periodic calibration of water meter WM at DIS1	2.2
38	Provide 'U' seal at scrubber SC2. Update P & I Diagram.	2.3
39	Establish the maximum safe temperature for exothermic reactions like Oxidation by carrying out DSC test review the rupture disc (RD) setting accordingly.	2.3
40	Estimate the heat removed capacity of the reactor at operating conditions. Establish the maximum heat removal requirement for the reaction system and hence the safety margin available.	2.3
41	Provide adequate pressure relief system for oxidation reactors.	2.3
42	All pressure safety valves should be set at 10% higher than the maximum achievable working pressure.	2.3
43	Prepare "On Site Emergency Plan" based on MCLS Study.	2.3
44	Provide fire hydrant system with water runoff system.	2.3
45	Leak detection at the vent of scrubber.	2.3
46	Instrumentation interlock with feed in case agitation failure. Consider signal for interlock from no load current and not on only power supply current.	2.3
47	Provide splash guards on flange joints of the Caustic dosing line.	2.3
48	Avoid any flange joint in the Caustic pipe line crossing over walkway.	2.3
49	Reduction reactors are vented through condenser, mal-operation or failure of the valve provided in vent line over the condenser may subject the system to unsafe condition.	3.1
	Consider proper venting for the system and ensure ease access to the vent valve.	
50	Temperature control instrumentation high temperature interlock with feed with alarm for reduction reactor	3.1
51	Adequate Pressure relief arrangement (SRV, RD, Dump Tank) flame arrestor at vent reduction reactor.	3.1
52	Avoid any sources of ignition in the area of reduction area.	3.1
53	Connect all the release vents and direct for safe disposal such as scrubber in reduction area.	3.1

82

SN.	ACTION SUGGESTED	REF NODE
54	Avoid the buildup of excess nitro compound in the reaction mass at reduction reactor.	3.1
55	Ensure effective washing to iron sludge to make it free from residual product.	3.1
56	Periodic testing of the reactors by competent person.	3.1
57	Ensure adequate mixing pattern in bottom dish material.	3.1
58	SOP for blockage removal operation VPF1.	3.2
59	Safety shower and eye wash fountain VPF1 area	3.2
60	No standby pump for P14D	3.2
71	Safety shower and eye wash fountain at HT5 area	3.3
72	Connect vent of ANF5/ ANF6 to scrubber.	3.3
73	SOP for blockage removal operation HT5.	3.3
74	Contain any accidental spill for safe disposal and route floor washings through ETP.	3.3
75	Avoid any organic contaminated water entering storm drain.	3.3
76	Provide effective measures for prevention of accumulation of static charge to a dangerous extent.	3.4
77	Electrical as per electrical area classification of SFD area.	3.4
78	Ensure no Acetic Acid traces left in the feed to SFD.	3.4
79	Vacuum to ANF may be considered and introduce process control check at this step.	3.4
80	Provide Dust detector in the vent of SFD.	3.4
81	Carry out powder safety tests and take precautions required for the safety class of powder are applicable.	3.4
82	Explosion vent of SFD to be located at safe place.	3.4
83	Any bought equipment like SFD, identification of Hazop Study report and operating manual is to be insisted from the supplier.	3.4
84	As the equipments at each building block/ plant are fixed there can be comprehensive Master P & I Diagram for each plant or building block which remains as starting point for the HAZOP Study. Any modifications/ alterations/ additional precautions as outcome of the HAZOP Study meeting need to be viewed with respect to such master P & I Diagram, recorded and P & I Diagrams update where ever necessary.	3.4

82

ANNEXTURE V

Note on Odour Management Oric Chemicals Aurangabad

Following chemicals are stored and handled in the plant:

1. Para Nitro Toluene (p NT) in tanks
2. Acetic acid in tanks

Products and Intermediate products

3. Para nitro toluene o sulfonic acid (PNTOSA) CAS no 121-03-94.
4. 4, 4 Diaminostibene-2 -2 -Di sulfonic acid DAS CAS no 81-11-8
5. 4, 4 Dinitrostibene-2 -2 -Di sulfonic acid DNS CAS No 128-42-7

As per the MSDS of these products the properties with respect to odour and compatibility are as follows:

1. The information as per the MSDS available it is clear that all are solids and Acetic acid is high boiling liquid and none of the chemicals handled have any odour problem at the room temperature at which these are handled.
2. All these are kept in tanks securely and separately and handled and transferred in the closed system and handled by the operators wearing masks and PPES to prevent any exposure.
3. All are non-compatible with strong oxidizers only. And there is no presence of strong oxidizers in the plant.

IMORTANT PROPERTIES OF THE CHEMICALS WITH RESPECT TO ODOUR AND NON-COMPATIBILITY

Para Nitro Toluene (p NT) in tanks

1. a) Physical state & Color Form: Solid
2. c) Odour: Aromatic
3. Odour threshold limit: Not available
4. e) Freezing/ Melting point 52 °C
5. f) Boiling Point/range 238 °C
6. Incompatible Materials: Various plastics and rubbers

4, 4'-Di amino stilbene-2, 2'disulfonic acid

State: Solid

Odour: characteristic

Odour Thresh hold limit: Not determined

MP= 133.5 Degree C

Incompatible materials: Oxidisers

Acetic Acid

Physical State Liquid

Appearance Colorless

Odor vinegar-like

Odor Threshold No information available

LC50 Inhalation

Acetic acid 3310 mg/kg (Rat) - > 40 mg/L (Rat) 4 h

Boiling point 117 degree C

Incompatible Materials Strong oxidizing agents, Strong bases, Metals

Oleum 23%

Physical State Liquid

Appearance Light brown

Odor pungent

Odor Threshold: not available

Melting Point 2 Degree C

Boiling point: 138 degree c

Incompatible materials: Bases, Strong oxidizing agents, Ammonia, Combustible material, Metals, Reducing Agent

4, 4 Dinitrostiebene-2 -2 -Di sulfonic acid DNS CAS No 128-42-7

MSDS indicates that it is solid and there is no data available on odour or other critical properties.

Director

ANNEXTURE IX

VOC Mitigation Measures

Process Operation and potential source of VOC	Recommended devices / Equipment/utility
Charging of solvent in the Reactor	a) The provision of overhead tank or addition tank. None of the solvents shall be charged directly in the Reactor.
Reactor -Equipment	<ul style="list-style-type: none"> a) The various accessories and joints shall be provided with tongue and grieve flanges and flange joints shall be provided with appropriate guard or clamps to avoid escape of any vapors or liquid. b) The Reactor drive system shall be provided with mechanical seal to restrict any possible escape of such solvent to surrounding atmosphere.
Condenser	<ul style="list-style-type: none"> a) Condenser shall be of appropriate capacity and utility. Recommended is chilled water, cooling water within let supply temperature 20°C b) Recommended to install a sub cooler as secondary condenser of appropriate capacity and provision of chilled water/brine as utility. c) Condenser vents shall be connected to a dump tank having jacket and provision of cooled water circulation as utility. d) The Dump tank shall be provided with a vent with minimum height of 12 feet with flame arrestor.
Reaction mass Filtration	<ul style="list-style-type: none"> a) Filters shall be of suitable capacity and closed and not open to air or surrounding atmosphere. Open Nutsche Filter shall not be used which are open to surrounding air. b) Nitrogen gas with oxygen content less than 0.0009 shall be purged. c) The filtrate having product shall be collected in the close vessel with appropriate vent height and provision offlame arrestor. d) The close vessels as storage tank shall have jacket with cooled water circulation.
Centrifuge	<ul style="list-style-type: none"> a) Centrifuge equipment shall be for suspension and top or bottom discharge b) The operation shall be in close loop and not manually charged with product slurry for separation for solid and liquid. c) The vent of the centrifuge shall be connected with close tank with below additional vent with flame arrestor. d) The filtrate shall be collected in a close tank or receiver with appropriate jacket utility.[Cooled water or chilled water]

	<p>e) The transfer of filtrate to the distillation vessels or for recovery shall be through appropriate pump with mechanical seal and in close loop.</p>
Charging Tanks	<p>a) Charging tanks shall be of suitable size and shall be connected to main or bulk storage tank.</p> <p>b) Supply line shall be of lower size than the Return or overflow line to avoid any overflow by any means.</p> <p>c) The pumps shall be provided with mechanical seal and cut off device [level control switch] so that it will stop once an appropriate level is reached.</p> <p>d) An alarm system shall be provided</p>
Dosing Pumps	Dosing pumps shall be installed to avoid manual operation in the case where an addition of a reactant is required to be controlled with time.
Drying Operation	<p>a) In case of atmosphere drying operation, the dryers shall be provided with utility cut off device so that overheating shall be controlled.</p> <p>b) In case of vacuum drying operation non Return valves and utility pneumatic control device shall be suitable installed.</p> <p>c) The dryer exhaust or vent shall be connected to water Scrubber so that the solvent vapors shall be appropriately scrubbed and will not be released to air or surrounding atmosphere.</p>
Distillation column or recovery system	<p>a) All the flange joints shall be appropriately covered with flange guards.</p> <p>b) Condensers shall be of appropriate capacity and utility.</p> <p>c) Condenser vent shall be of appropriate height and shall be connected to a tank with secondary vent and appropriate jacket cooling system.</p> <p>d) Distilled solvent shall be transferred in a close loop.</p> <p>e) Solvent distillation Residue shall be discharged with Nitrogen blanketing and in close containers.</p> <p>f) Solvent containers or drums shall be sealed appropriately.</p>
Training for avoiding wrong operation for escape of VOC and causing health hazard.	<p>The working staff and rest all the employees in the manufacturing and factory premises shall be trained for the various operations in line with standard operating Procedure</p> <ol style="list-style-type: none"> 1. On job training. 2. Class Room training. 3. Standard operating procedure shall be in place for checkup of the equipment and devices in operation and shall be strictly implemented

ANNEXURE X

BONDE TECHNICAL SERVICES

Date:- 17th June 2023

To,

M/S. ORIC ORGANIC CHEMICALS PVT. LTD.

ROOM NO. 205, 2ND FLOOR,
22-D, MOTLIBAI WADIA BUILDING,
S.A. BRELVI ROAD, MUMBAI - 400 001.

KIND ATTENTION : DR. SHAVAK K. BHUMGARA.
Chairman & Managing Director.

SUBJECT : EMERGENCY PLAN.

Respected Sir,

Thanking you for the trust shown in assigning the preparation of **Emergency Plans** for your proposed plant at **AURIC City**, located at Plot No. 9, Sector 1, Village: Shendra, Aurangabad - 431 154 to us.

Please consider this letter as acceptance of the work by us as per attached work order issued by you.

Thanking you,

Yours Faithfully,

FOR BONDE TECHNICAL SERVICES

(S. L. BONDE)
Proprietor

Enclosed:

Work Order No.: ORIC/23-23/18 dated 17.06.2023 for Emergency Plan.

ANNEXUREXI

**ORIC
ORIC ORGANIC CHEMICALS PVT. LTD.**

Head Office : 205, 2nd Floor, 22-D, Motlibai Wadia Building, S. A. Bhati Road, Fort, Mumbai - 400 001.
Tel. No. +91-22-22670305 / +91-22-22680647 Email : info@oricorganics.com

UNDERTAKING

We, M/s Oric Organics Chemicals Pvt. Ltd. state that our proposal is being considered for Environmental Clearance for our project situated at Plot no. 9, Sector 1, AURIC City, Chh. Sambhajinagar (MH).

We undertake that, rain water harvesting facility will be completed before commissioning of manufacturing activity.

Thanking you,

For Oric Organic Chemicals Pvt. Ltd.

Rishad S. Bhungara
Director

7	No. of Air changes	Per Hr.	13.1	Minimum 6

Remark: Ventilation is within limits prescribed by Factory Act, 1948.

Instrument Used : Anemometer - SAEN/Instru/50 A, Calibration Cert. No. 2324/1118/01-24, Valid till - 17.11.2024.

Instrument Used : Thermohygrometer - SAEN/Instru/S2F, Calibration Cert. No. 2324/1118/01-02, Valid till - 17.11.2024.

As Per Factories Act 1948, The amount of fresh air supplied by mechanical means of ventilation in an hour shall be equivalent to at least six times the cubic capacity of the workroom.

Note:

1. Test Report is based on above parameters.
2. Test Results pertain only to the sample tested.
3. The content of Test Report shall not be reproduced / used for advertising or legal use, in part or full, without written permission.
4. The instruments & equipments used for sampling and analysis are calibrated from NABL Accr. Calibration Laboratory, to maintain NIST Traceability.
5. Laboratory Recognized by NABL with Certificate ID : TC-12368, Valid till dt. 09.10.2025.
